SATISFACTION

is a good thing and worth going a great way for.

Satisfaction is getting what you want.

If for any reason a purchase in this store does not prove entirely satisfactory, the chance to make it right is earnestly requested.

There is no reason why a customer should ever be lost if she will only allow us to assist her in getting what she wants.

It may be had as easily as not, and nothing is any trouble to us if it results in

SATISFACTION

The Johnston-Walker-McCrackin Co. Mt. Vernon

Home of Gail M. Sinkey, Centerburg, R. D. 2.

KNOX COUNTY

SOME FACTS AND FIGURES

KNOX COUNTY, with a total of 3,272 farms in an area of 513 square miles, is distinctly a farm county. More than 98 per cent. of the entire area of the county is in its farms, and more than 83 per cent. is under cultivation. The farms are, as a rule, of more than average size, less than 6 per cent. being under ten acres. They are, almost without exception, profitable and correspondingly valuable. The farmers, as a class, are the most prosperous folks in the county. In view of the number of farmers, that is in itself a statement of the wealth of this section.

The farm population of Knox County is almost exclusively native-born white. There are but few foreign, and only two negro farmers in the entire county, according to the most recent United States Government statistics.

It is interesting to note the number of farms in the county operated by their owners. Of this class there are 2,421 or 74 per cent. One thousand eight hundred and twenty-three or 75 per cent. of them are reported free of mortgage debt. This is an exceptionally large percentage. On the balance, the remarkably low mortgage indebtedness of only 26 per cent. of the entire valuation is carried. Even in the absence of other statistical figures, these mortgage statements alone would indicate exceptional prosperity among Knox County farmers.

The largest single crop, and the one produced most generally throughout the entire county, is corn, of which 1,795,605 bushels were produced in 1910, a notably bad crop year, but the latest for which authoritative figures are available. Following closely on this for quantity is wheat, with

a total of 491,200 bushels; oats comes next, with 333,064 bushels, and potatoes fourth, with 220,121 bushels. The combined total value of these four crops was in excess of three million dollars.

Everywhere is an atmosphere of hard work. Everyone takes work seriously and as a matter of course. There is no false pride about it, and no failure to realize its importance and its necessity. Rich farmers' wives and sons and daughters take pride in their fine butter, their eggs, their vegetables, their chickens and their stock. The relations between the people of the farms and the people of the county seat are most cordial. The farmers deposit their savings in the local banks, and deal in the local stores.

This directory is published in the belief that it will serve to acquaint the residents of one end of the county with those of the other. We believe it to be accurate. We realize, however, that even in the most carefully compiled and printed books certain errors are bound to appear, and we apologize in advance for any such that may be found by our subscribers.

GENERAL HARDWARE IMPLEMENTS AND BUGGIES

**STOVES, RANGES, THRESHING AND SAW MILL MACHINERY
ENGINES, GASOLINE ENGINES, PUMPS, WAGONS, TANKS**

**MANUFACTURER OF
OHIO FARMERS STOCK FOOD CO. PRODUCTS**

Stock Food—An excellent tonic and preventive of all diseases common to horses, cattle, sheep and hogs.

Poultry Food—The greatest egg producer; chick, duck and turkey starter. A sure cure for gapes.

These remedies are endorsed and used by leading stockmen and poultrymen.

BOWERS' LIFE OF LEATHER

The old time-tried preparation for leather. It cures the defect of poor tonnage, makes the leather water proof and pliable; feeds the fibre so the leather last twice as long as it will without oil. A two-in-one—an oil and polish. Goes further than any oil and gives better results. Once tried always used.

WRIGHT'S FRENCH OINMENT

For Man—Cuts, Bites, Burns, Piles, Insect Bites and Stings, Bruises, Chapped Skin and Chafing, Corns and Chilblains.

For Beast—Brittle and Cracked Hoof, Wire Cuts, Burns, Sores, Scratches, Harness Galls, Cracked Heels, Contracted Feet, and All Diseases of the Hide, Feet and Hoofs of Animals. Prevents Dry, Shelly, Cracked Hoof; Polishes, Dresses and Preserves them. **Remember—No Hoof, No Horse.**

One View of Our Modern and Well Equipped Dental Parlors

GOOD TEETH AN AID TO GOOD HEALTH

Nature has endowed each individual with a set of teeth to serve the very special purpose of properly masticating the food—an absolute necessity if good health be preserved throughout one's entire life.

From infancy on, if the teeth were retained in sound condition, it would not only aid the rapid, mental and physical development of the child, but would save them much dental trouble, time, pain and expense in the future. The child cannot be healthy and in a receptive mood for study if its mouth is unclean, caused by decayed teeth and roots, brought about by the neglect of "little troubles", for the teeth deteriorate rapidly, once they begin, and arrested in time the average tooth ailment is arrested for ALL TIME—allowed to develop and serious measures are necessary. Parents, therefore, should feel themselves in duty bound to make their children's teeth, as well as their own, "useful as well as beautiful" and this can only be done by having competent and experienced dentists examine and care for the teeth at regular periods.

Securing Orders for the Knox County Directory.

Don't Let Them Talk You Into It!

“How to select a monument” is something the average person knows nothing about. They don't have time to learn the different granites and styles of monuments, so have to depend, to a great extent, if not entirely, on what some inexperienced agent or dealer tells them.

We sell monuments by mail and want to call your attention to this branch of our business. It is the plan that gives you a chance to select a monument in the quiet of your home, in the presence of your family; no agent there to worry you into buying something you do not want. You have a chance to quietly discuss with your family or friends the different styles and prices, so you can readily see why we claim this to be the ideal way.

Our work is made right here under our personal supervision, so we can guarantee to give the very best of work at a price that defies competition.

Write us, giving an idea as to how much money you are willing to put into a monument, then we shall place before you a proposition that will interest you.

Take the matter up with us, it costs nothing to try, and we are sure we can please you.

The McGee-Starr Granite Co.

MILTON S. LEWIS

"RALEIGH'S INTERESTED PRINCE 129679" is Now at Head of Herd at **WOODLAND HALL JERSEY FARM**

He is a grandson of Eminent's Raleigh (sire of 48 tested daughters), great-grandson of Eminent (sire of 70), Oxford Lad (sire of 27), Interested Prince (sire of 33)—three above 800, and Golden Grand (sire of a number), a son of Golden Lad (sire of 38).

Each line of his pedigree is full of records of performance, but space does not permit doing it justice.

His ancestors are nearly all show ring winners as well as R. of M. performers of the first class. He is strictly of imported type and breeding.

"THE BULL IS HALF OF THE HERD"

should never be forgotten when breeding dairy cattle.

He is being mated with daughters and granddaughters of

EMINENTS RALEIGH	GOLDEN INTEREST	GOLDEN GRAND
INTERESTED PRINCE	MELIA ANN'S KING	ST. LAMBERT BOY
GOLDEN LAD OF ST. OWEN	FOX PRINCE OF TRINITY	

The females are all heavy milkers, out of the best of R. of M. breeding. Herd is free of disease.

I am also breeding MARSTON'S INTERESTED PRINCE, IRENE'S JACOBIA PREMIER and MR. POLO OF BLEAK HOUSE to some richly bred heifers.

BLOOD WILL TELL

ALTO McKINNEY

MARK, 2.17 $\frac{3}{4}$; TRIAL, 2.12 $\frac{3}{4}$ —\$1500

FLORIS van SCHAEPEBEKE

No. 4932—\$1200

Summing up briefly the blood lines of ALTO McKINNEY it will be clearly observed that he carries a combination of the McKINNEY-ELECTIONEER cross with strong infusion of thoroughbred blood through both his granddam, FLIRTILLA, and his grandsire, PALO ALTO, 2.08 $\frac{3}{4}$. ALTO McKINNEY comes from the greatest trotting families of the present decade. The get of McKINNEY have won more money than the get of any sire, selling for \$50,000 at the age of 18 years.

FLORIS van SCHAEPEBEKE, an imported BELGIAN, weighing about 1900 lbs., is as good a colt breeder as is in Knox County.

HARRY C. BOUTON, Owner R. D. No. 2, Mt. Vernon, Ohio
 (Two miles north of town)

These horses will stand at home, first four days of the week, and at Rinehart's Livery, Mt. Vernon, Fridays and Saturdays.

HEADQUARTERS FOR

Flour, Feeds, Seeds, Salt, Fertilizers

A Complete Line of Poultry Feeds

POULTRYMEN—"GET OUR PRICES"

T. D. Updike & Son, Centerburg, Ohio

BOTH PHONES

THE CENTERBURG FLOUR MILL

Manufacturers of the Famous Light Sponge Flour

By careful milling, using the best of Ohio wheat ground here in our own community, blending with the proper amount of Spring wheat flour, makes it one of the Leaders for All Baking Purposes.

Light Sponge Flour is sold by our own home grocers to our home people, thereby boosting a flour made in our own community.

The Centerburg Flour Mill has a good line of quality feeds and assures you the prices are as low as proper buying of feeds will permit.

To the poultry man who knows our feeds, we have his business, and to those not already buying, let us prove this to your entire satisfaction. Growing chickens should be fed on our Blatchford's Milk Mash, as it grows mammoth chicks. Fine for forcing broilers.

You know that Saginaw Plate Glass Co. Salt is the best because we sell it.

We have a Complete Line of Seeds. Wheat Stored for Flour.

Yours for future business,

Quality Tools for Quality Work

No matter what the size of
your place is, you need an
outfit of

KEEN KUTTER TOOLS

even if it's only a Hammer,
a Saw or a Plane.

The Quality, Temper and
Finish is right when it carries the

KEEN KUTTER Trade Mark.

That means a positive guar-
antee for good work and
materials at their best.

HARDWARE

You can't blame us if we point, with a good deal of pride, to the fact that we have been selling Hardware, on the West side of the Public Square, for over forty years. We have built up steadily thru these years because of **our absolutely honest business methods.** To this foremost requisite in merchandizing, we have added Quality in what we sell, Efficient Service and the Right Prices. Our friends, coupled with the foregoing features, have made us successful.

More Farmers Should Build Silos

But—before building do not fail to investigate the Suidiana. They keep the ensilage perfectly; are as durable as a Silo can possibly be made. Easily put up, and so reasonable in price and sold on such terms that no farmer should be without one. Notice the substantial door frame, which is the backbone of a Silo, and the self-locking doors and the splice in the staves which makes a two-piece stave practically equal to a one-piece and much cheaper. I will sell you a Silo and help you put it up, if you wish. Can save you money on a cutter also.

We keep Jersey Cattle and usually have some good young stock for sale.

Poultry Diseases and Enemies

(From the Biggle Poultry Book)

Many of the ills that poultry flesh is heir to are directly traceable to bad breeding and treatment. In-and-in-breeding is practiced and the law of the survival of the fittest is disregarded until the stock becomes weak and a prey to disease.

Yards and runs occupied for any considerable time become covered with excreta and a breeding ground for all manner of disease germs.

Dampness from leaky roofs or from wet earth floors, and draughts from side cracks, or from overhead ventilation slay their thousands yearly.

A one-sided diet of grain, especially corn, moldy grain or meal, decayed meat or vegetables, filthy water, or the lack of gritty material are fruitful sources of sickness.

In the treatment of sick birds much depends on the nursing and care. It is useless to give medicine unless some honest attempt be made to remove the causes that produce the disturbance. Unless removed the cause will continue to operate and the treatment must be repeated.

It is an excellent plan to have a coop in some secluded place to be used exclusively as a hospital. If cases cannot be promptly treated it is better to use the hatchet at once and bury deeply, or burn the carcasses. This is the proper plan in every case where birds become very ill before they are discovered.

Sick birds should in no case be allowed to run with the flock and to eat and drink with them.

In giving the following remedies we make no pretence to a scientific handling of the subject.

FEVERS, from colds, fighting of cocks, etc. Symptoms: unusual heat of body, red face, watery eyes and watery discharge from nostrils.

Give dessertspoonful citrate of magnesia and, as a drink, ten drops of nitre in half a pint of water.

APOPLEXY AND VERTIGO, from overfeeding or fright. Symptoms: unsteady motion of the head, running around, loss of control of limbs. Give a purgative and bleed from the large veins under wing.

PARALYSIS, from highly seasoned food and over stimulating diet. Symptoms: inability to use the limbs, birds lie helpless on their side. Treatment—The same as for apoplexy.

LEG WEAKNESS occurs in fast-growing young birds, mostly among cockerels. A fowl having this weakness will show it by squatting on the ground frequently and by a tottering walk. When not hereditary it usually arises from a diet that contains too much fat and too little flesh and bone-making material, such as bread, rice, corn and potatoes. To this should be added cut green bone, oats, shorts, bran and clover, green or dry. Give a tonic pill three times a day made of sulphate of iron, 1 grain; strychnine, 1 grain; phosphate of lime, 16 grains; sulphate of quinine, ½ grain. Make into thirty pills.

CANKER OF THE MOUTH AND HEAD.—The sores characteristic of this disease are covered with a yellow cheesy matter which, when it is removed, reveals the raw flesh. Canker will rapidly spread through a flock, as the exudation from the sores is a virulent poison, and well birds are contaminated through the soft feed and drinking water. Sick birds should be separated from the flock and all water and feed vessels disinfected by scalding or coating with lime wash. Apply to sores with a small pipet syringe or dropper the peroxide of hydrogen. When the entire surface is more or less affected, use a sprayer. Where there is much of the cheesy matter, formed, first remove it with a large quill before using the peroxide. A simple remedy is an application to the raw flesh of powdered alum, scorched until slightly brown.

SCALY LEG, caused by a microscopic insect burrowing beneath the natural scales of the shank. At first the shanks appear dry, and a fine scale like dandruff forms. Soon the natural scale disappears and gives place to a hard, white scurf. The disease passes from one fowl to another through the medium of nests and perches, and the mother-hen infecting her brood. To prevent its spread, coat perches with kerosene and burn old nesting material and never use sitting hens affected by the disease. To cure, mix ½ ounce flowers of sulphur, ¼ ounce carbolic acid crystals and stir these into 1 pound of melted lard. Apply with an old tooth brush, rubbing in well. Make applications at intervals of a week.

WORMS in the intestines of fowls indicate disturbed digestion. Loss of appetite and lack of thrift are signs of their presence. Give santonin in 2-grain doses

six hours apart. A few hours after the second dose give a dessertspoonful of castor oil. Or, put 15 drops of spirits of turpentine in a pint of water and moisten the feed with it.

BUMBLE-FOOT, caused by a bruise in flying down from perches or in some similar manner. A small corn appears on the bottom of the foot, which swells and ulcerates and fills with hard, cheesy pus. With a sharp knife make a cross cut and carefully remove all the pus. Wash the cavity with warm water, dip the foot in a solution of one-fourth ounce sulphate of copper to a quart of water and bind up with a rag and place the bird on a bed of dry straw. Before putting on the bandage anoint the wound with the ointment recommended for scaly leg or coat it with iodine.

GAPES, caused by the gape-worm, a parasite that attaches itself to the windpipe, filling it up and causing the bird to gasp for breath. The worm is about three-fourths of an inch long, smooth and red in color. It appears to be forked at one end, but in reality each parasite is two worms, a male and female, firmly joined together. This parasite breeds in the common earth worm. Chicks over three months old are seldom affected. If kept off of the ground for two months after hatching, or on perfectly dry soil, or on land where affected chicks have never run, chicks will seldom suffer from the gapes. Old runs and infested soil should have frequent dressings of lime.

In severe cases the worms should be removed. To do this put a few drops of kerosene in a teaspoonful of sweet oil. Strip a soft wing feather of its web to within an inch of the tip, dip in the oil, insert feather in windpipe, twirl and withdraw. Very likely some of the parasites and mucus will come with it. The rest will be loosened or killed, and eventually thrown out. It may be necessary to repeat the operation.

To kill the worm in its lodgment, gum camphor in the drinking water or pellets of it as large as a pea forced down the throat is recommended. Turpentine in the soft feed, as advised in the treatment for worms in the intestines, is said to be effective. Pinching the windpipe with the thumb and finger will sometimes loosen the parasite.

When broods are quartered on soil known to be infested, air-slacked lime should be dusted on the floor of the coop, and every other night, for two or three weeks, a little of the same should

be dusted in the coop over the hen and her brood. To apply, use a dusting bellows and only a little each time.

CHOLERA is due to a specific germ, or virus, and must not be confounded with common diarrhoea. In genuine cholera digestion is arrested, the crop remains full, there is fever and great thirst. The bird drinks, but refuses food and appears to be in distress. There is a thickening of the blood, which is made evident in the purple color of the comb. The discharges from the kidneys, called the urates, which in health are white, become yellowish, deep yellow, or, in the final stages, a greenish-yellow. The diarrhoea grows more severe as the disease progresses. A fowl generally succumbs in two days. The virus of cholera is not diffusible in the air, but remains in the soil, which becomes infected from the discharges, and in the body and blood of the victims. It may be carried from place to place on the feet of other fowls or animals. Soil may be disinfected by saturating it with a weak solution of sulphuric acid in water. Remove at once all well birds to new and clean quarters and wring the necks of all sick birds and burn their carcasses and disinfect their quarters.

For cases not too far gone to cure give sugar of lead, pulverized opium, gum camphor, of each, 60 grains, powdered capsicum (or fluid extract of capsicum is better, 10 drops), grains, 10. Dissolve the camphor in just enough alcohol that will do so without making it a fluid, then rub up the other ingredients in the same bolus, mix with soft corn meal dough, enough to make it into a mass, then roll it and divide the whole into one hundred and twenty pills. Dose, one to three pills a day for grown chicks or turkey, less to the smaller fry. The birds that are well enough to eat should have sufficient powdered charcoal in their soft feed every other day to color it slightly, and for every twenty fowls five drops of carbolic acid in the hot water with which the feed is moistened.

ROUP.—The first symptoms are those of a cold in the head. Later on the watery discharge from the nostrils and eyes thickens and fills the nasal cavities and throat, the head swells and the eyes close up and bulge out. The odor from affected fowls is very offensive. It is contagious by diffusion in the air and by contact with the exudations from sick fowls. To disinfect houses and coops burn sulphur and carbolic acid in

them after turning the fowls out and keep closed for an hour or two. Pour a gill of turpentine and a gill of carbolic acid over a peck of lime and let it become slaked, then scatter freely over the interior of houses and coops and about the yards.

For the first stages spray the affected flock while on the roost or in the coop with a mixture of two tablespoonfuls of carbolic acid and a piece of fine salt as big as a walnut in a pint of water. Repeat two or three times a week. Or, if a dry powder is preferred, mix equal parts of sulphur, alum and magnesia and dust this in their nostrils, eyes and throat with a small powder gun. The nasal cavities should be kept open by injecting with a glass syringe or sewing machine oil-can a drop or two of crude petroleum. A little should be introduced also through the slit in the roof of the mouth. Give sick birds a dessertspoonful of castor oil two nights in succession, and feed soft food of bran and corn meal seasoned with red pepper and powdered charcoal. A physician advises the following treatment: hydrastin, 10 grains; sulph. quinine, 10 grains; capsicum, 20 grains. Mixed in a mass with balsam copaiba and made into twenty pills; give one pill morning and night; keep the bird warm and inject a saturated solution of chlorate potash in nostrils and about 20 drops down the throat.

Pip, so-called, is not a disease but only a symptom. The drying and hardening of the end of the tongue in what is called "pip" is due to breathing through the mouth, which the bird is compelled to do because of the stoppage of the nostrils. By freeing the natural air passages the tongue will resume its normal condition.

DIPHTHERIA is a contagious disease. The first symptoms are those of a common cold and catarrh. The head becomes red and there are signs of fever, then the throat fills up with thick, white mucus and white ulcers appear. The bird looks anxious and stretches its neck and gasps. When it attacks young chicks it is frequently mistaken for gapes. When diphtheria prevails, impregnate the drinking water with camphor, a teaspoonful of the spirits to a gallon of water, and fumigate the house as recommended for roup.

Spray the throat with peroxide of hydrogen or with this formula: 1 ounce glycerine, 5 drops nitric acid, 1 gill water. To treat several birds at once with medi-

cated vapor, take a long box with the lid off, make a partition across and near to one end and cover the bottom with coal ashes. Mix a tablespoonful each of pine tar, turpentine and sulphur, to which add a few drops, or a few crystals, of carbolic acid and a pinch of gum camphor. Heat a brick very hot, put the fowls in the large part and the brick in the other, drop a spoonful of the mixture on the brick and cover lightly to keep the fumes in among the patients. Watch carefully, as one or two minutes may be all they can endure. Repeat in six hours if required.

CROP-BOUND.—The crop becomes much distended and hard from obstruction of the passage from the crop to the gizzard by something swallowed; generally, it is long, dried grass, a bit of rag or rope. Relief may sometimes be afforded by giving a tablespoonful of sweet oil and then gently kneading the crop with the hand. Give no food, except a little milk, until the crop is emptied. Wet a tablespoonful or more of pulverized charcoal with the milk and force it down the throat. Should the crop not empty itself naturally pluck a few feathers from the upper right side of it and with a sharp knife make a cut about an inch long in the outer skin. Draw this skin a little to one side and cut open the crop. Remove its contents, being careful not to miss the obstruction. Have a needle threaded with white silk ready, and take a stitch or two in the crop skin first, then sew up the outer skin separately. Put the patient in a comfortable coop, and feed sparingly for a week on bran and meal in a moist state, and give but little water.

SOFT OR SWELLED-CROP arises from lack of grit, or from eating soggy and unwholesome food. The distended crop contains water and gas, the bird is feverish and drinks a great deal. By holding it up with its head down the crop will usually empty itself. When this is done give teaspoon doses of charcoal slightly moistened twice at intervals of six hours. Restrict the supply of water and feed chopped onions and soft feed in moderation.

EGG-BOUND, DISEASES OF THE OVIDUCT. Overfat hens are often troubled in this way. Forcing hens for egg production will sometimes break down the laying machinery. Give green food, oats, little corn, and no stimulating condiments. Let the diet be plain and cooling in its

nature.- To relieve hens of eggs broken in the oviduct, anoint the forefinger with sweet oil and deftly insert and draw out the broken parts. When the hen is very fat and the egg is so large it cannot be expelled, the only way to save the hen is to break the egg and remove it as above directed.

WHITE-COMB OR SCURVY, caused by crowded and filthy quarters and lack of green food. The comb is covered with a white scurf. This condition sometimes extends over the head and down the neck, causing the feathers to fall off.

Change the quarters and diet, give a dose of castor oil and follow this with a half a teaspoonful of sulphur in the soft food daily.

RHEUMATISM AND CRAMP caused by cold and dampness. Chicks reared on bottom-heat brooders are particularly subject to these troubles. Damp earth floors and cement floors in poultry houses produce it in older birds.

Give dry and comfortable quarters, feed little meat, plenty of green food, and soft feed seasoned with red pepper.

DIARRHŒA of chicks with clogging of the vent. Remove the hardened excre-

tion and anoint the parts. Chamomilla is useful in this complaint, a few drops in drinking water.

FROSTED COMB AND WATTLES.—As soon as discovered bathe with compound tincture of benzoin.

FOR LICE on perches, walls and coops, use kerosene or lime wash. To make the lime-wash more effective, pour a little crude carbolic acid on the lime before slaking or mix with plenty of salt.

For use in nests, pour crude carbolic acid on lime and allow it to air-slake. Put one or two handfuls of the carbolized lime dust in the nest box.

Pyrethrum powder kills by contact and is effective for dusting in nests, and through the feathers of birds. Its judicious use in the plumage and nests of sitting hens will insure immunity from lice for the hen and her young brood.

Chicks and poults are often killed by large lice that congregate about the head, throat, vent and wings. To destroy them, soak fish berries in alcohol, take the birds from under the mothers at night and slightly moisten the down of the infested parts with the poison.

How to Preserve Eggs

Now that eggs are dearer as a rule than they have been for years, many people are inquiring about the methods of preserving them. The old way was to pack them in salt or lime. This served the purpose, but it gave the eggs a very strong taste.

The approved method now is the one which calls for the use of "water glass," or silicate of soda. This is a thick, syrupy liquid which can be had at most drug stores for about 10 cents a pound, and a pound is enough to treat five dozen eggs, so that the cost of preserving is about two cents a dozen.

There are several grades of water glass, and it is wise to get the best. To prepare the solution, stir one part of the silicate of soda into sixteen parts of water which has been boiled, cooled and carefully measured.

It is essential to have the eggs fresh, or the experiment will not be a great success. Those over three days old should not be used, as the air has already had a chance to penetrate them. The very best way is to keep the solution made up ready and put the eggs into it just as soon as they are brought in from the nests, if you have your own chickens.

It is worse than useless to try to preserve eggs that are not fresh or that have been cracked or washed.

Incubation and Gestation Tables

Chickens	20-22 days
Geese	28-34 days
Ducks	28 days
Turkeys	27-29 days
Guinea fowls.....	28 days
Pheasants	25 days
Ostriches	40-42 days

The period of gestation in animals varies considerably, but the following is an average period based on a long series of observations:

Elephant	2 years
Camel	11-12 months
Ass	12 months
Mare	11 months
Cow	9 months
Sheep	5 months
Goat	5 months
Pig	3½ months
Bitch	9 weeks
Cat	8 weeks
Rabbit	30 days
Guinea pig.....	65 days

FARMERS' BULLETINS

**Sent Free to Residents of the United States, by Department of Agriculture
Washington, D. C., on Application.**

NOTE.—Some numbers omitted are no longer published. Bulletins in this list will be sent free, so long as the supply lasts, to any resident of the United States, on application to his *Senator, Representative, or Delegate in Congress*, or to the Secretary of Agriculture, Washington, D. C. Because of the limited supply, applicants are urged to select only a few numbers, choosing those which are of special interest to them. Residents of foreign countries should apply to the Superintendent of Documents, Government Printing Office, Washington, D. C., who has these bulletins for sale. Price, 5 cents each to Canada, Cuba, and Mexico; 6 cents to other foreign countries.

SPRAYING FORMULAS

FUNGICIDES.—Bordeaux mixture is made by taking three pounds of sulphate of copper, four pounds of quicklime, fifty gallons of water. To dissolve the copper sulphate, put it into a coarse cloth bag and suspend the bag in a receptacle partly filled with water. Next, slake the lime in a tub, and strain the milk of lime thus obtained into another receptacle. Now get some one to help you, and with buckets, *simultaneously* pour the two liquids into the spraying barrel or tank. Lastly, add sufficient water to make fifty gallons. It is safe to use this full-strength Bordeaux on almost all foliage—except, perhaps, on extra tender things, such as watermelon vines, peach trees, etc. For these it is wiser to use a half-strength mixture.

FORMALIN.—This is also called formaldehyde, and may be purchased at drug stores. Its principal use is to treat seed potatoes to prevent "scab." Soak the whole seed for two hours in a mixture of one-half pint formalin and fifteen gallons of cold water; dry the seed, cut, and plant in ground that has not recently grown potatoes.

BORDEAUX COMBINED WITH INSECT POISON.—By adding one-quarter pound of Paris green to each fifty gallons of Bordeaux, the mixture becomes a combined fungicide and insecticide. Or, instead of Paris green, add about two pounds of arsenate of lead. The advantages of arsenate of lead over Paris green are, first, it is not apt to burn foliage even if used in rather excessive quantities; and, second, it "sticks" to the foliage, etc., better and longer.

INSECTICIDES.—ARSENATE OF LEAD.—This is the best insecticide for chewing insects, and is for sale by seedsmen. Use about two pounds in fifty gallons of water.

WHITE HELLEBORE.—This, if fresh,

may be used instead of Paris green in some cases—worms on currant and gooseberry bushes, for instance. (It is not such a powerful poison as the arsenites, and would not do so well for tough insects such as potato-bugs.) Steep two ounces in one gallon of hot water, and use as a spray.

FOR SUCKING INSECTS.—Now we come to another class of insecticides, suited to insects which suck a plant's juice but do not chew. Arsenic will not kill such pests; therefore we must resort to solutions which kill by *contact*.

KEROSENE EMULSION.—One-half pound of hard or one quart of soft soap; kerosene, two gallons; boiling soft water, one gallon. If hard soap is used, slice it fine and dissolve it in water by boiling; add the boiling solution (away from the fire) to the kerosene, and stir or violently churn for from five to eight minutes, until the mixture assumes a creamy consistency. If a spray pump is at hand, pump the mixture back upon itself with considerable force for about five minutes. Keep this as a stock. *It must be further diluted with water before using.* One part of emulsion to fifteen parts of water, is about right for lice.

CARBOLIC ACID EMULSION.—Made by dissolving one pound of hard soap or one quart of soft soap in a gallon of boiling water, to which one pint of *crude* carbolie acid is added, the whole being stirred into an emulsion. One part of this is added to about thirty-five parts of water and poured around the bases of the plants, about four ounces per plant at each application, beginning when the plants are set out and repeated every week or ten days until the last of May. Used to fight maggots.

WHALE-OIL SOAP SOLUTION.—Dissolve one pound of whale-oil soap in a gallon

of hot water, and dilute with about six gallons of cold water. This is a good application for aphid (lice) on trees or plants. For oyster-shell or scurvy scale use this spray in May or June or when the tiny scale lice are moving about on the bark.

TOBACCO TEA.—Place five pounds of tobacco stems in a water-tight vessel, and cover them with three gallons of hot water. Allow to stand several hours; dilute the liquor by adding about seven gallons of water. Strain and apply. Good for lice.

LIME-SULPHUR MIXTURE.—Slake twenty-two pounds of fresh lump lime in the vessel in which the mixture is to be boiled, using only enough water to cover the lime. Add seventeen pounds of sulphur (flowers or powdered), having previously mixed it in a paste with water. Then boil the mixture for about an hour in about ten gallons of water, using an iron but not a copper vessel. Next add enough more water to make, in all, fifty gallons. Strain through wire sieve or netting, and apply while mixture is still warm. A good, high-pressure pump is essential to satisfactory work. Coat every particle of the tree. This is the standard San Jose scale remedy, although some orchardists prefer to use the soluble oil sprays now on the market.

PYRETHRUM, OR PERSIAN INSECT POWDER.—It may be dusted on with a powder bellows when the plants are wet; or one ounce of it may be steeped in one gallon of hot water, and sprayed on the plants at any time. It is often used on flowers, in greenhouses, on vegetables, etc.

BISULPHIDE OF CARBON.—This is used to kill weevils in beans and peas, etc. It comes in liquid form and may be had of druggists. When exposed to the air it quickly vaporizes into a poisonous and explosive gas which is heavier than air and which will destroy all insect life. (Caution.—Do not inhale the vapor, and allow no lights near.)

Tobacco stems, tobacco dust, kainit, soot, freshly-slaked lime, dust, etc., are often used as insect *preventives*—in the soil around plants to keep away grubs, worms and maggots, or dusted on to discourage the visits of cucumber bugs, etc. (Note.—The first four are excellent fertilizers as well as insect preventives.)

Crows and blackbirds frequently pull up planted corn. The best preventive is to tar the seed, as follows: Put the seed into a pail and pour on enough warm water to cover it. Add a teaspoonful of coal-tar to a peck, and stir well. Throw the seed out on a sieve or in a basket to drain, and then stir in a few handfuls of land plaster (gypsum), or air-slaked lime.

A NEW FUNGICIDE.—Some orchardists are now using the following self-boiled lime-sulphur spray, instead of Bordeaux, claiming that it is less liable to spot or burn fruit and foliage: Put eight pounds of unslaked lump lime in a barrel; add enough water to cover. When the lime begins to heat, throw in eight pounds of flowers of sulphur. Constantly stir and gradually pour on more water until the lime is all slaked; then add the rest of the water to cool the mixture. About fifty gallons of water, in all, are required. Strain. Two pounds of arsenate of lead may be added, if desired, to the finished mixture, which then becomes a combined fungicide *and* insecticide, and may be used in the same manner as advised for Bordeaux-arsenate of lead. (Special note.—The self-boiled mixture is *not* the same as the lime-sulphur advised for San Jose scale, which is too strong for trees in foliage.)

If you do not care to bother with making spraying mixtures at home, they can be purchased, already prepared, of seedsmen. For only a few trees or plants, the extra cost of these factory mixtures is not great.

SPRAYING CALENDAR

PLANT	FIRST APPLICATION	SECOND APPLICATION
APPLE (<i>Scab, rot, rust, codling moth, bud moth, tent caterpillar, canker worm, curculio, etc.</i>)	When buds are swelling, but before they open, Bordeaux.	If canker worms are abundant just before blossoms open, Bordeaux-arsenical mixture.
ASPARAGUS (<i>Rust, beetles.</i>)	Cut off all shoots below surface regularly until about July 1st.	After cutting ceases, let the shoots grow and spray them with Bordeaux-arsenical mixture.
BEAN (<i>Anthraxnose, leaf blight, weevil, etc.</i>)	Treat the seed before planting with bisulphide of carbon. (See remarks.) When third leaf expands, Bordeaux.	10 days later, Bordeaux.
CABBAGE (<i>Worms, lice, maggots, etc.</i>)	Pyrethrum or insect powder.	7-10 days later, repeat.
CELERY (<i>Blight, rot, leaf spot, rust, caterpillars.</i>)	Half strength Bordeaux on young plants in hotbed or seedbed.	Bordeaux, after plants are transplanted to field. (Pyrethrum for caterpillars if necessary.)
CHERRY (<i>Rot, aphid, slug, curculio, black knot, leaf blight, or spot, etc.</i>)	As buds are breaking, Bordeaux; when aphid appear, tobacco solution or kerosene emulsion.	When blossoms drop, Bordeaux-arsenical mixture.
CURRENT GOOSEBERRY (<i>Worms, leaf blight.</i>)	At first appearance of worms, hellebore.	10 days later, hellebore. Bordeaux if leaf blight is feared.
GRAPE (<i>Fungous diseases, Rose bugs, lice, flea, beetle, leaf hopper, etc.</i>)	In spring, when buds swell, Bordeaux.	Just before flowers unfold, Bordeaux-arsenical mixture.
MELONS CUCUMBERS (<i>Mildew, rot, blight, striped bugs, lice, flea beetle, etc.</i>)	Bordeaux, when vines begin to run.	10-14 days repeat. (Note: Always use half strength Bordeaux on watermelon vines.)
PEACH (<i>Rot, mildew, leaf curl, curculio, etc.</i>)	As the buds swell, Bordeaux.	When fruit has set, repeat. Jar trees for curculio.
PEAR AND QUINCE (<i>Leaf blight, scab, psylla, codling moth, blister mite, slugs, etc.</i>)	As buds are swelling, Bordeaux.	Just before blossoms open, Bordeaux. Kerosene emulsion when leaves open for psylla, if needed.
PLUM (<i>Curculio, black knot, leaf blight, brown rot, etc.</i>)	When buds are swelling, Bordeaux.	When blossoms have fallen, Bordeaux-arsenical mixture. Begin to jar trees for curculio.
POTATO (<i>Flea beetle, Colorado beetle, blight rot, etc.</i>)	Spray with Paris green and Bordeaux when about 4 in. high.	Repeat before insects become numerous.
TOMATO (<i>Rot, blight, etc.</i>)	When plants are 6 in. high, Bordeaux.	Repeat in 10-14 days. (Fruit can be wiped if disfigured by Bordeaux.)

NOTE.—For San Jose scale on trees and shrubs, spray with the lime-sulphur mixture in autumn after leaves fall, or (preferably) in early spring, before buds start. The lime-sulphur

SPRAYING CALENDAR

THIRD APPLICATION.	FOURTH APPLICATION.	REMARKS.
When blossoms have fallen. Bordeaux-arsenical mixture.	8-12 days later, Bordeaux - arsenical mixture.	For aphid (lice) use one of the lice remedies mentioned elsewhere. Dig out borers from tree trunks with knife and wire. For oyster-shell scale, use whale-oil soap spray in June.
2-3 weeks later, Bordeaux-arsenical mixture.	Repeat in 2-3 weeks.	Mow vines close to ground when they are killed by frost, burn them, and apply a mulch of stable manure.
14 days later, Bordeaux.	14 days later, Bordeaux.	For weevils: Put seed in tight box, put a cloth over seed, pour bisulphide of carbon on it, put lid on and keep closed for 48 hours. Use 1 oz. to 4 bus. of seed.
7-10 days later, repeat.	Repeat every 10-14 days until crop is gathered.	Root maggots: Pour carbolic acid emulsion around stem of plants. Club root: Rotate crops; apply lime to soil; burn refuse; treat seed with formalin before planting.
14 days later, repeat.	14 days later, repeat.	Rot or rust is often caused by hilling up with earth in hot weather. Use boards for summer crop. Pithy stalks are due to poor seed; or lack of moisture.
10-14 days, Bordeaux.	Hellebore, if a second brood of slugs appear.	Black knot: Dark fungous-looking bunches or knots on limbs. Cut off and burn whenever seen.
10-14 days, repeat, if necessary.	2 to 4 weeks later, repeat.	Cane-borers may be kept in check by cutting out and burning infested canes.
When fruit has set, Bordeaux - arsenical mixture.	2 to 4 weeks later, Bordeaux.	For lice, use any of the lice remedies. For rose bugs, use 10 pounds of arsenate of lead and one gallon of molasses in 50 gallons of water, as a spray. Or knock the bugs into pans of kerosene every day.
10-14 days, repeat.	10-14 days, repeat.	Use lice remedies for lice. For striped bugs, protect young plants with a cover of mosquito netting over each hill. Or keep vines well dusted with a mixture of air-slaked lime, tobacco dust and a little Paris green.
When fruit is one-half grown, Bordeaux.	NOTE:—It is safer always to use half-strength Bordeaux on peach foliage.	Dig out borers. Cut down and burn trees affected with "yellows."
After blossoms have fallen. Bordeaux-arsenical mixture.	8-12 days later, repeat.	Look out for "fire blight." Cut out and burn blighted branches whenever seen.
10-14 days later, repeat.	10-20 days later, Bordeaux.	Cut out black knot whenever seen.
Repeat for blight, rot and insects.	Repeat.	To prevent scabby tubers, treat the seed with formalin before planting.
Repeat in 10-14 days.		Hand-pick tomato worms.

mixture is a fungicide as well as a scale cure, and if it is used the first early Bordeaux spray may be omitted.

Hog Ailments and How to Treat Them

(From the Biggle Swine Book)

More has been spoken and written on the subject of hog cholera than upon any other one subject connected with hogs. It has ever been a fruitful source for discussion at farmers' institutes and an endless theme on which to write. The Government has appropriated large sums of money and has employed learned men who have labored with seeming diligence for years, and yet after all these years of waiting and all this expenditure of money we are forced to admit, whether humiliating or not, that we know but very little that is of practical benefit about the whole matter.

But two things are absolutely known about the disease. One is that it sweeps unrestrained over vast areas of country, leaving death and destruction in its wake; and the other is that hogs which contract the disease usually die.

We shall not attempt to deal with this subject in a scientific way, but shall deal with it rather from a practical standpoint.

A somewhat recent means of preventing the disease is the serum or antitoxin cure. It consists in introducing into the system of the animal a serum which enables the body to more successfully combat the disease. The Government officials seem to be highly pleased with the results so far and seem to believe that relief from the dread disease is likely to come through this means. The serum produced last year, wherever used in cholera-infected herds, saved over eighty per cent. of the animals. It is easily applied, and its good effects in sick hogs are seen almost immediately.

Page after page has been written as a means of telling hog cholera, but much of it is difficult of comprehension to the average reader. If you have never had it in your herd you are to be congratulated on your good fortune; and if you ever do, when you are done with it you may not have as many hogs as you did before, but rest assured of one thing, and that is you will know hog cholera when you see it again. As a rule hogs do not look well for weeks before an attack. At other times it will come like a bolt of lightning from a clear blue sky. The first thing noticeable is a loss of appetite; the hair will look harsh and dry; sometimes a slight cough will be noticeable, at other times not.

The disease is sometimes of slow development, at other times quite rapid. Instead of the sprightly, rapid movement so characteristic of the young and growing hog, he moves slowly and indifferently; he looks gaunt and tired; his back is arched, and he moves his hind legs with a dragging motion; his temperature will most likely be high, probably from 104 to 108—the normal temperature of the hog is from 100 to 102. His bowels may be costive or the discharges may be thin and watery in substance, but usually black or dark in color, emitting an offensive odor peculiar to the disease.

The disease may be of a lingering character and the animals linger for weeks, or they may die in three or four days. Usually the lingering type is less fatal than the more rapid forms of the disease. Hogs which discharge freely in the first stages of the disease are more likely to recover than when the bowels remain constipated. Dark blue spots will often appear under the skin. The bowels will be more or less inflamed inside; in the small intestines and sometimes in the stomach will be found ulcers; this, however, is not common in the first stages of the disease. The bladder will most likely be full of a dark thick substance, showing that the kidneys, and in fact the whole internal organism, are affected.

If we were to say what we thought was the best thing that could possibly be done when cholera appears in a herd, we would unhesitatingly say, take the well hogs to clean new quarters where no hogs have been for years. Then if more of them take sick move them again, and it is our belief based on actual experience that more can be accomplished in this way than by the use of all the medicine in the country. For various reasons it is not always possible to move hogs, and in that case treatment may be resorted to, sometimes with fairly good results. The treatment should consist in separating the well from the sick hogs, and in dividing the sick hogs according to age and size and severity of the attack. Not more than four or five hogs should be in the same pen, and fewer would be still better. Feed but little, and let that be food which is easily digested. Use air-slacked lime and crude carbolic acid freely as a disinfectant. Use it both on the hogs and on the ground, in

the sleeping places, on the fences and in the drinking vessels. As much depends on a thorough use of disinfectants as upon any other thing. If the bowels are constipated give something to move them. If too loose give something to check them. In short, use good common horse sense (so to speak) and you will usually succeed very well. There is nothing better than salts or oil to move the bowels, and nothing shows better results in checking them than a few drops of crystal carboic acid. We know of no food better, if indeed as good, for sick hogs than ship stuff, or middlings as it is sometimes called; it seems to digest easily and is soothing to the bowels.

If the weather is wet and cold keep the hogs dry and warm. In wet weather (if not too warm) keep the hogs in a floored pen, or at least in a pen where no water will lie in sinks or holes, as dirty water is one of the worst things a sick hog can possibly have. If the weather is warm, shelter the hog from heat. In other words, make him as comfortable as possible.

Let it be borne constantly in mind that much depends on good nursing. It would seem natural and reasonable that an animal afflicted as he is would do best if allowed plenty of fresh water to drink, but actual experience demonstrates that a greater number recover when the supply of water is limited than when it is not.

Hogs that are very sick should be kept by themselves, as others seem to disturb them, and often their recovery depends on being perfectly still at the critical period of the disease. As a rule hogs that are too sick to eat die. All hogs that die of cholera, or of any other disease for the matter of that, should be burned and not buried, as abundant evidence can be produced to prove that the carcasses of hogs dying of cholera have been the cause of an outbreak years afterward. By all means burn all dead hogs as the only absolutely safe way of disposing of them. The burning operation is very simple. Lay the bodies across two logs, sticks or pieces of iron that will keep them up off the ground so that the fire can get under them, and the grease from their own bodies will usually do the work, with a little wood or corn cobs added occasionally.

Experience teaches that the disease more commonly appears in large herds than in small ones. The moral of this, then, is easily understood. Do not keep

hogs in large droves. Not over twenty-five or thirty hogs at most should long remain together, and half the number would be infinitely better and safer in every way. Hogs of different sizes and ages should not be kept together, excepting of course sows and suckling pigs. Hogs should not be kept on the same ground from year to year if it can possibly be avoided. Plow up the lots and pens and cultivate them for a year or two; it will greatly assist in keeping your lots free from the germ. The disease is much more prevalent in the summer and fall months than in other seasons of the year. Then as far as is possible reduce the number of hogs on the farm at this season of the year.

If your neighbor's hogs have the disease, stay away from his pens and be sure he stays away from yours. Shoot a crow, a buzzard, or a stray dog that comes on your place as unhesitatingly as you would kill a mad dog. This trio does more to scatter the disease than all the other causes combined. If your hogs are fit or any way near fit to go to market when the disease makes its appearance in the neighborhood, sell them without delay. "A bird in hand is worth two in a bush." If your hogs have cholera this year, don't get discouraged and quit, but try it again, on fresh ground.

If your brood sows have passed through the cholera, keep them; they are valuable. They will never again have the disease, and their pigs are not nearly so apt to contract it as pigs from sows that have not had the disease. Look out for streams which come down from some neighbor above you. This has been found a frequent cause of cholera outbreaks. The germs of hog cholera possess great vitality, and will live in the soil, in moist matter and especially in water, for months.

If you feed corn, rake the cobs together often and burn them; pour water on the coals and then put salt on the charcoal thus made and you have an excellent preventive for diseases, with little or no cost. Keep your hogs, excepting brood sows, ready for market. It may come handy some day. Strong, vigorous hogs are less liable to contract the disease than hogs of less strength and vigor. Then breed and feed for both these things. Eternal vigilance in hog breeding, as in other kinds of business, is the price of success.

Here is a formula for the treatment of hog cholera that is probably as good as

any, which is not saying much. It is suggested by the Department of Agriculture:

Sulphur1 pound.
 Wood charcoal.....1 pound.
 Sodium chloride.....2 pounds.
 Sodium bicarbonate...2 pounds.
 Sodium hyposulphite..2 pounds.
 Sodium sulphate.....1 pound.
 Antimony sulphide....1 pound.

Thoroughly mix and give a large tablespoonful to each 200-pound hog, once a day. If the animal does not eat, add the medicine to a little water, thoroughly shake and give from a bottle by the mouth. If the animal will eat, mix the medicine with sloppy food. The same remedy is recommended as a preventive to those animals that do not as yet show signs of disease.

If you have had cholera on your place, and you have small, inexpensive pens, burn them at once. In a piggery, burn all the litter and loose inexpensive parts; renew the floor, if possible, and disinfect the remainder by washing it with hot water and washing soda. After washing, apply with a whitewash brush, or better yet a spray pump, a solution of one part of carbolic acid to fifty parts of water. Then thoroughly whitewash. Treat the fences in the same way. Earth floors should be removed to a depth of at least six inches and the ground sprinkled with chloride of lime and a few days later a good coating of air-slacked lime. Don't put pigs in the quarters for at least six months, and, if possible, have them vacant over the first winter.

An Ohio breeder of large experience, in the Miami valley, where hog cholera first appeared in 1856 and has recurred at frequent intervals, holds that drugs, virus and antitoxin have all been fairly tried sundry times by him and his neighbors. He believes that prevention will do more to hold in check the plague than drugs and hypodermic infusions. The most important help to prevent spread of disease is not to allow the hog farm to become infected with the excrement of diseased hogs. This can be done by quarantining the herd in a field, that is to be put under cultivation the following year. This quarantine must be established as soon as the first pig is taken sick. If the disease is in the neighborhood, carefully watch for first symptoms of disorder. Do not wait until several are sick and scouring, for this excrement is loaded with germs of disease, and these germs may retain vitality many

months when covered in the corners of pens, or filth of yards, or about an old straw stack; but when exposed to sunlight or dryness they lose vitality in a few days, and under some very drying sunlight conditions in a few hours. Carefully observing these facts, he has in forty years been clear of hog cholera the year following an attack, and on until the disease has become epidemic in his neighborhood. After the herd has been placed in quarantine away from the permanent hog houses, lots and feeding floors, he kills and burns, or buries five feet deep, each animal as soon as it shows distinct symptoms of disease. They are burned or buried beside the quarantine, and in the field to be cultivated the following year. It requires nerve to kill breeding stock of great value, but they are as liable to spread and entail disease as any other, when once attacked.

If, by any means, we can prevent spread of germs, by so much do we hold the disease in check. A farm, with its feed lots and pens and shelters infected by the excrement of the diseased, becomes as deadly a centre as the public stock-yards and filthy stock cars on the railroads, and these are so thoroughly infected that we can never safely take stock hogs from these to our farms. This is not theory, but well proven fact.

Pig ailments are numerous; we shall speak only of some of the most common.

It is always best to give medicines mixed with food or drink where possible. If the animal refuses food or drink and it is necessary to administer drugs, it may be done by placing a stout chain (an ordinary harness breast chain does very well) within the mouth and well back between the jaws, which are thus kept from crushing the bottle. Two or three men are necessary for the undertaking, one or two to hold the chain and one to pour the medicine. The head should be well elevated, which places the pig on his haunches. Do not pour the medicine fast enough to strangle the animal.

Hogs will not do well when the skin is covered with filth. Bad air will bring on coughs; all corn for food, fever; a wet bed, rheumatism; and a big bunch together will breed disease. With a clean skin, good air, a variety of food, a dry bed and a few together, and lots of out-of-doors, they will do well.

When at pasture they find many roots, nuts and pebbles, besides being continually active, which does more than food

for their hearty health, rapid and easy digestion and speedy, profitable growth.

THUMPS.—This disease is quite common (especially in the early spring) and is exceedingly hard to handle when once contracted. More can be done to prevent than to cure. You visit the sow and litter in the morning to give them their accustomed feed, and you notice that one of the fattest and plumpest ones does not leave his bed as do the others. You enter the sleeping room and compel him to come out, which he does somewhat reluctantly, and you will notice that his sides move with a peculiar jerking motion, and if allowed he will soon return to his bed. Rest assured he has thumps, and nine chances to one he will die. It is caused by fatty accumulations about the breast, which interfere with its action, and the lungs work hard—pump for dear life to keep up the heart's action—to send the blood through the body. The pig is faint because of feeble circulation, and he is cold, and soon dies from exhaustion or weakness. He has no strength to suck or move.

To prevent thumps, get over into the pen several times a day and hustle the little pigs about the pen; also stint the sow so that she will give less milk. Pigs when they stir about, and when they are thin in flesh, rarely have thumps.

Thumps rarely occurs among pigs farrowed after the weather is fine, but does quite frequently occur among pigs farrowed in early spring. If the weather is cold and stormy and the sow and litter keep their bed much, then be on the lookout for thumps. Guard against it by compelling both sow and litter to exercise in the open air.

CANKEROUS SORE MOUTH is a disease which is quite common and which if not promptly taken in hand is often quite fatal. When pigs are from a few days to two weeks old, you may notice a slight swelling of the lips or a sniffling in the nose. An examination will show a whitish spongy growth on the sides of the mouth just inside the lips or around the teeth. This is cankerous sore mouth, and if not taken promptly in hand will result in the death of the entire litter, and will sometimes spread to other litters.

Some claim the disease is caused by damp and filthy beds, others say it comes from a diseased condition of the sow, and still others claim it is caused by the little pigs fighting over the teats and wounding each other with their sharp

teeth, and stoutly aver that if the teeth are promptly removed no case of sore mouth will ever occur.

Hold the pig firmly and with a knife or some cutting instrument remove all the spongy foreign growth, and be sure you get it all even though the pig may squeal and the wound bleed; your success in treating the disease will depend largely on the thoroughness with which you remove this foreign growth. After removing the fungous growth apply an ointment made of glycerine and carbolic acid in about the proportion of one part of the acid to from five to eight parts glycerine. Repeat this each day for three or four days and the disease will usually yield. You may discover in a day or two after commencing treatment that you did not succeed in removing all the cankerous growth at first, and if so, repeat the cutting operation till you do remove it all.

Another treatment which we have heard recommended is to catch the diseased pig and dip his nose and mouth up to his eyes in chlora naphtholeum without diluting it. This is certainly easily done and is highly commended by the person suggesting it.

BLIND STAGGERS, INDIGESTION, SICK STOMACH, FOUNDER.—Causes, over-feeding, especially common with new corn; sour or decayed food. Sudden warm sultry weather predisposes in highly fed hogs. Insufficient exercise is also a predisposing cause.

Symptoms.—Loss of appetite, bowels constipated, or maybe diarrhoea. In some severe cases blind staggers and great paleness of mouth and nose, coldness of surface of body; abdomen may be distended and drum-like from contained gases.

Treatment.—Remove sick animals, provide clean, dry, well ventilated quarters, with chance for exercise, and fresh earth and water. If animal will eat, give light feed. Give charcoal in lump form, also mix soda bicarbonate in food at rate of two tablespoonfuls per day to each half-grown animal. It is rarely necessary to drench with medicine. If recovery begins, use care not to again feed too much.

MILK FEVER occurs in sows immediately after farrowing or within the first few days afterwards. The symptoms are loss of milk, swollen, hard condition of the milk glands, which are more or less painful on pressure. Sow may not allow the pigs to suck; she may lie flat on her

belly or stand up, and in extreme cases the sow has spells of delirium, in which she may destroy her young.

Cause.—Injudicious feeding, overfeeding on milk-producing foods. Do not feed sow quite full rations for few days just before and after farrowing.

Treatment.—Give sow plenty of cool clean water; bathe the swollen glands for half hour at a time with water as warm as she will bear, dry thoroughly with soft cloth and give good dry pen. If bowels seem constipated give the sow internally one-half pint pure linseed oil. (Never use the boiled linseed oil used by painters; it is poisonous.) If the sow starts killing her young, or has no milk for them, it is best to take most of them, or all, away from her and feed by hand with spoon or ordinary rubber nipple and bottle. For this use one part boiled water and three parts cow's milk. The pigs may be returned to the sow if her milk returns.

SCOURS among pigs is another common and very troublesome though not dangerous disease. This disease is not confined to any particular season, but is more common in the wet, damp weather of April and early May than in other seasons of the year.

As in thumps, remove the cause. This disease is almost invariably caused by some improper food eaten by the sow. A sour swill barrel is often the cause. It should be borne in mind that pigs once affected will be more liable to a recurrence of the disease than those never affected, and greater care should be used with them for some weeks till they fully recover.

CONSTIPATION.—Cause, improper feeding, exclusive grain diet, lack of exercise. Not dangerous in itself, but frequently followed by prolapsus of the rectum, or what is commonly called piles. The constant straining causes this. The only remedy is laxative food and exercise. The protruding bowel must be washed clean as soon as seen and well covered with olive oil or lard. It should then be returned by applying firm pressure with the hand, and when once in place should be retained by three or more stitches of waxed linen or heavy silk thread, passed from side to side through the margins of the opening, care being used to take a deep hold in the skin.

While this operation is being done the animal should be held by the hind legs by two assistants, thus elevating the hind

quarters. Allow stitches to remain two or three weeks.

RHEUMATISM.—A disease of the joints, manifested by pain, heat and lameness, with swelling of one or several joints. There may be high fever and loss of appetite. May be acute and rapid in its course, or slow, chronic and resulting in permanent enlargements of the bones of the legs, especially the knee and hock.

Causes.—Primarily deranged digestion, lack of exercise; dampness and exposure to draughts of cold air also a cause. The tendency to rheumatism is hereditary in certain families of hogs.

Treatment.—Endeavor to prevent by proper exercise, food and attention to surroundings. Do not breed rheumatic specimens even if fully recovered from lameness. In acute cases an adult hog should have twice or three times daily one drachm salicylate soda.

ASTHMA sometimes occurs in adult hogs.

Symptoms.—Shortness of breath on least exercise, noisy breathing, more or less intermittent. Do not breed; butcher early.

CONGESTION OF THE LUNGS sometimes occurs, the result of driving or chasing. May be rapidly fatal.

Symptoms.—Sudden shortness of breath and sudden great weakness. The hog is not adapted to rapid driving; if it must be driven at all, give plenty of time.

PNEUMONIA (LUNG FEVER) may follow congestion of the lungs; may be induced by crowding too many hogs together, when they heat and become moist, after which they are in poor condition to withstand cold.

Symptoms.—Loss of appetite, chills, short cough, quick breathing.

Treatment.—Separate sick at once from the drove; give dry quarters with abundance of dry bedding; tempt appetite with small quantities of varied food. Apply to sides of chest, enough to moisten the skin, twice daily, alcohol and turpentine equal parts; continue until skin becomes somewhat tender.

TETANUS (LOCK-JAW).—Caused by introduction into the system of the tetanus bacteria, which gains entrance through a wound.

Symptoms.—A stiffness of more or less the entire muscular system, generally most marked in the jaws, which are greatly stiffened. Eating very slow, or entirely stopped; appetite not lost.

Treatment.—Some cases recover if

carefully nursed. Give nourishing drinks, elevate trough or bucket so the patient can get its snout into the drink; give dissolved in hot water and mixed with the slop forty grains bromide of potash two or three times daily until improvement is noticed. Do not attempt to drench. Any wound which seems to be a cause should be cleansed and wet often with five per cent. solution of carbolic acid and water.

LICE.—Very commonly found upon hogs. They are introduced by new purchases or by visiting animals.

Caution.—Examine the newly purchased hog well on this point before placing with the drove. Hog lice are quite large and easily detected on clean white animals, but not readily on dark or dirty skins.

Remedy.—Wash well with soap and water, if weather is not too cold, then warm water, if weather is not too cold, then apply enough petroleum and lard, equal parts, to give the skin a complete greasing. If weather is too cold for washing, clean with stiff brush. Creolin one part to water five parts is also a safe and sure remedy. Two or more applications are necessary at intervals of four or five days to complete the job. The wood-work of pens and rubbing places must be completely whitewashed.

MANGE.—Caused by a microscopic parasite which lives in the skin at the roots of the bristles.

Symptoms.—Intense itching with redness of the skin from the irritation of rubbing. Rather rare, but very contagious.

Treatment.—Separate diseased animals; scrub them thoroughly with warm water and strong soap; apply ointment composed of lard, one pound; carbonate of potash, one ounce; flor. sulphur, two ounces; wash and re-apply every four days.

MAGGOTS.—The larvæ of the ordinary blow-fly frequently infests wounds on hogs during the summer months. Watch all wounds during hot weather; keep them wet frequently with creolin one part and water six parts, or five per cent. watery solution carbolic acid. If the maggots gain entrance to the wound, apply either above remedies freely, or ordinary turpentine with a brush or common oil can.

ROUND WORMS.—Very common in shotes and young hogs, not apparently harmful, unless in great numbers, when they cause loss of flesh. They may be

exterminated by keeping the hog without food for twenty-four hours, and giving to each shote or old pig one tablespoonful of turpentine thoroughly beaten up with one egg and one-half pint of milk.

TUBERCULOSIS (CONSUMPTION).—A contagious disease common in man, cattle and not rare in the hog.

Symptoms.—Loss of flesh, cough, diarrhoea, swelling about the head and neck, which may open and discharge with little tendency to heal; death in from few weeks to months. Post mortem shows various sized tubercles, which may be situated in any part of the body, most commonly in the bowels, lungs, liver, or glands of the neck.

Causes.—Direct contagion from other hogs, but generally from feeding milk from tuberculous cows, or by eating butcher offal from such cows.

Prevention.—Care as to the source of the milk fed; if suspicious, boiling will render it safe. Do not feed butcher offal; separate suspicious hogs at once, and if satisfied they are tuberculous, kill and bury deep, or burn them. The tuberculin test can be applied to the remainder of drove, as without it it is impossible to say how many may be diseased.

WOUNDS generally heal readily in the hog if kept clean and free from maggots. The result of neglected castration wounds is sometimes serious. Have the animal clean as possible when castrated, and endeavor to keep it clean and give opportunity for abundant exercise until wound is healed. There is probably nothing better and safer to apply to wounds of the hog than creolin one part, water six parts.

TRAVEL SICKNESS.—Similar to ordinary sea-sickness in man; very common in shipping pigs by wagon.

Symptoms.—Vomiting, diarrhoea, great depression; seldom if ever fatal. May be rendered much less severe by very light feeding before shipment.

To Find the Amount of Wall Paper Required to Paper a Room

Measure the distance around the room deduct the width of each window and door, take two-thirds of result. Divide this result by the number of strips that can be cut from each roll and you have the number of rolls required. A roll is generally a foot and a half wide, 24 feet long and contains 36 square feet, or 4 square yards.

Handy Things to Know

A rod is $16\frac{1}{2}$ feet, or $5\frac{1}{2}$ yards.
 A mile is 320 rods.
 A mile is 1,760 yards.
 A mile is 5,280 feet.
 A square foot is 144 square inches.
 A square yard contains 9 square feet.
 A square rod is $272\frac{1}{4}$ square feet.
 An acre contains 43,560 square feet.
 An acre contains 4,840 square yards.
 An acre contains 160 square rods.
 A quarter section contains 160 acres.
 An acre is 8 rods wide by 20 rods long.

An acre is 10 rods wide by 16 rods long.

An acre is about $208\frac{3}{4}$ feet square.

A solid foot contains 1,728 solid inches.

A pint (of water) weighs 1 pound.

A solid foot of water weighs $62\frac{1}{2}$ pounds.

A gallon (of water) holds 231 solid inches.

A gallon of milk weighs 8 pounds and 10 ounces.

A barrel of flour weighs 196 pounds.

A barrel of salt weighs 280 pounds.

A barrel of beef weighs 200 pounds.

A barrel of pork weighs 200 pounds.

A barrel of fish weighs 200 pounds.

A keg of powder equals 25 pounds.

A stone of lead or iron equals 14 pounds.

A pig of lead or iron equals $21\frac{1}{2}$ stone.

Anthracite coal broken—cubic foot—averages 54 pounds.

A ton loose occupies 40-43 cubic feet.

Bituminous coal broken—cubic foot—averages 49 pounds.

Cement (hydraulic) Rosendale, weight per bushel, 70 pounds.

A ton loose occupies 40-48 cubic feet.

Cement (hydraulic) Louisville, weight per bushel, 62 pounds.

Cement (hydraulic) Portland, weight per bushel, 96 pounds.

Gypsum ground, weight per bushel, 70 pounds.

Lime, loose, weight per bushel, 70 pounds.

Lime, well shaken, weight per bushel, 80 pounds.

Sand at 98 pounds per cubic foot, per bushel, $122\frac{1}{2}$ pounds.

18.29 bushels equal a ton. 1,181 tons cubic yard.

MEASURING HAY AND CORN

Hay is often sold in the mow or stack where the weight has to be estimated. For this purpose 400 cubic feet of hay is considered a ton. The actual weight of 400 cubic feet of hay will vary according to the quality of the hay, time of cutting, position in mow, etc. For making an estimate in a given case multiply together the length, breadth and height of the mow or stack in feet and divide the product by 400. The quotient will be the number of tons.

Corn is measured by the following rule: A heaped bushel contains 2,748 cubic inches. To find the number of bushels of corn in a crib it is therefore necessary merely to multiply together the length, width and height in inches and divide the product by 2,748. The number of bushels of shelled corn will be two-thirds of the quotient. If the sides of the crib are slanting, it will be necessary to multiply together one-half the sum of the top and bottom widths with the height and length.

The legal weight of a bushel of shelled corn in Pennsylvania, New Jersey, Maryland and Virginia is 56 pounds.

In Pennsylvania, Virginia and Maryland 32 pounds constitute a bushel of oats; in New Jersey, 30 pounds.

A bushel of wheat is placed at 60 pounds by most of the states of the Union.

Pennsylvania recognizes 56 pounds as a bushel of white potatoes. In Maryland, New Jersey and Virginia the legal weight is 60 pounds.

A bushel of clover seed in Pennsylvania must weigh 60 pounds; in Maryland, 60 pounds; in New Jersey, 64 pounds; in Virginia, 60 pounds.

A bushel of timothy seed in Pennsylvania must weigh 45 pounds, and the same weight in most adjacent states.

To estimate the amount of land in different fields under cultivation use the following table:

5 yards wide by 968	yards long, 1 acre
10 yards wide by 484	yards long, 1 acre
20 yards wide by 242	yards long, 1 acre
40 yards wide by 121	yards long, 1 acre
70 yards wide by $69\frac{1}{7}$	yards long, 1 acre
80 yards wide by $60\frac{1}{2}$	yards long, 1 acre
60 feet wide by 726	feet long, 1 acre
110 feet wide by 396	feet long, 1 acre
120 feet wide by 363	feet long, 1 acre
220 feet wide by 198	feet long, 1 acre
240 feet wide by $181\frac{1}{2}$	feet long, 1 acre
440 feet wide by 99	feet long, 1 acre

Seed Per Acre

It requires less seed per acre to sow in hills or rows than to sow broadcast. The hill or row system permits of after cultivation, which is not possible with a broadcasted crop. In all calculations for hill and drills it must be remembered that an acre of land contains 43,560 square feet. A square piece of land, 209 feet on a side, contains about an acre. The following figures are merely suggestive, as practice varies with locality:

ALFALFA, 25 to 30 lbs. broadcast.
 ASPARAGUS, 4 to 5 lbs. in drills; 1 oz. to 50 feet of row.
 BARLEY, $1\frac{1}{2}$ to 2 bushels drilled; 2 to $2\frac{1}{2}$ bushels broadcast.
 BEANS, bush, $1\frac{1}{2}$ bushels in drills.
 BEANS, pole, 10 to 12 qts., in hills.
 BEETS, 5 to 6 lbs., in drills.
 BUCKWHEAT, 1 bushel, broadcast.
 CABBAGE, $\frac{1}{4}$ lb. in seed bed, to be transplanted.
 CARROT, 3 to 4 lbs., in drills.
 CELERY, about 1 oz. for 2,000 plants; 1 lb. per acre.
 CLOVER, red, 8 to 10 lbs., broadcast.
 CLOVER, crimson, 15 lbs., broadcast.
 CLOVER, white, 6 lbs., broadcast.
 CORN, field and sweet, 8 to 10 qts.
 CORN, ensilage, 12 qts., in drills.
 COW PEAS, 1 bushel, in drills; $1\frac{1}{2}$ bushels, broadcast.
 CUCUMBERS, 2 lbs., in drills.
 EGG PLANT, 1 oz. seed for 1,000 plants; $\frac{1}{4}$ lb. to the acre.
 GRASS, lawn, 2 to 4 lbs., broadcast.
 LETTUCE, 1 oz. of seed to 1,000 plants; $\frac{1}{2}$ lb. to the acre.
 MELON, musk, 2 to 3 lbs., in hills.
 MELON, water, 4 to 5 lbs., in hills.
 MILLET, 1 bushel, broadcast.
 OATS, 3 bushels, broadcast.
 ONIONS, 5 to 6 lbs., in drills; for sets. 30 to 50 lbs., in drills.
 PARSNIPS, 4 to 6 lbs., in drills.
 PEAS, 1 to 2 bushels, in drills.

Shingles Required in a Roof

Double the rafters and multiply by length of building. Multiply this by 9 if exposed 4 inches, by 8 if exposed $4\frac{1}{2}$ inches, and by $7\frac{1}{5}$ if exposed 5 inches to the weather.

One thousand shingles, laid 4 inches to the weather, will cover 100 square feet of surface.

Eight hundred shingles, 5 inches to the weather, will cover 100 square feet.

One thousand shingles require 5 pounds of four-penny nails.

Five to ten per cent. should be allowed to these figures to cover waste and shortage.

One thousand laths will cover 70 yards of surface, and take 11 pounds of nails.

Two hundred and fifty pickets will make 100 lineal feet of fence.

Nails Required

For 1,000 shingles, $3\frac{1}{2}$ to 5 pounds 4d., or 3 to $3\frac{1}{2}$ pounds 3d.

For 1,000 laths about 7 pounds 3d. fine, or 8 pounds 2d. fine.

For 1,000 feet clapboards (siding), about 18 pounds 6d. box.

For 1,000 feet covering boards, about 20 pounds 8d. common, or 25 pounds 10d.

Nails—Common

Size	3d	4d	6d	8d	10d	12d
Length	$1\frac{1}{4}$	$1\frac{1}{2}$	2	$2\frac{1}{2}$	3	$3\frac{1}{2}$
No. to lb.	500	300	165	90	62	45
Size	16d	20d	30d	40d	50d	60d
Length	$3\frac{3}{4}$	4	$4\frac{1}{2}$	5	$5\frac{1}{4}$	6
No. to lb.	35	24	18	13	10	8

Eighteen to twenty-five pounds of nails are required per 1,000 feet of lumber.

Grease a nail and it won't split wood.

WHAT THIS STORE STANDS FOR!

T is the aim and purpose of this Store to give you a heaping dollar's worth of merchandise for every dollar you spend here. No matter what you purchase, we want you to know that you can depend upon it in every way. Only such goods as will satisfy you completely will ever be sold in this store.

"Bigger and better values for your money" is our motto. That is why your money will have greater buying power here.
