Figurine fragment showing a right punctated-spline earflange. Flange is very flat. Central hole slightly off-set towards top, and it looks enhanced with a round object after molding -- clay lip present.

Flange is on either an ear or flange. This part is rectangular; its edges are cut flat. Behind it the attachment area shows finishing striations. Back goes straight out at 90 degree angle to ear/flange. All surfaces look wiped. Moderately eroded. Central firing core. No burning, slip, paint, or decoration. Not drawn.
