structure #99

2/12/88

first 40 cm. / significant amount of sherds, about a 2m. from
1 x 1 m. lots 1 + 2. mound.

next 40 cm about same as above
1 x 1 m. lots 3 + 4.

lot 5 20 cm. started hitting structure, in the form of
tumble, no defined wall as of yet.

decided to continue on surface to end of trench
considering it all as lot 6. here they will continue
cleaning of surface. removing none of the rock structures.

when ~~rock~~ structure is cleared, and rock formation
is visible, until end of trench, decision will be made
as to which direction to continue.

not many sherds found in lot # 6.

about 10 small sherds found so far in 6.

maybe more will show up before end of trench.

which has about a meter left. before completion.

(2 small pieces of dome found)

somewhere along the line op. 11A, has gotten off
in measurements. the last remaining meter is ~~24~~
24 cm. over.

The sixth one is a small one, but it is a good one. It is a good one, but it is a small one. It is a good one, but it is a small one. It is a good one, but it is a small one.

Op. 14B

(Description taken from view of south trench wall) started hitting large rock formation, about 1 meter ~~in from south trench wall, possible a little before~~ 80 cm. into trench. large surface rock is in the form of tumble.

Bottom of rock surface, seems to be a pavement, it has been named pineapple. it is composed of 3 medium sized rocks on the right along with smaller stones intervening. Directly above pavement on the rock right ~~is~~ is a massive rock, which seems to connect, further on right, to another structure, possibly a corner, or beginning of another structure, it has been named.

mango. Immediately behind line of pineapple pavement and mango structure lies another wall line, which has been named Grapefruit. Grapefruit is composed of 3 large rocks, sizes ranging from 40 to 50 cm in length, about 10-15 cm in ~~to~~ depth.

mango - 149 cm

W30 (Description taken from view of ~~west~~ ^{above} west side of trench)
H 22"

Space between from grapefruit wall, looking above trench. east trench + ^{scattered} ~~about~~ 20 meters into surface of trench, various ^{size} rocks mango = 31.5 cm ~~scattered~~ ^{strategic} placement, bare area, for about space from 10 cm, unusual rock formation occurs, in form of west trench: circle, named guava; continues into western trench 7 cm. wall, directly behind guava, is rock formation on the left 15 cm from known as tangerine, composed of 3 large rocks, with trench surface/smaller rocks at its base. towards right, structure consisting of 4 rocks placed, or fallen, in upwards angles. 94 cm this structure is known as lime. Beyond structures from, south mentioned is unknown, trench wall 25 cm. below ground surface.

p-88-~~15~~¹⁵-4

Survey: My first day of survey.

Retraced tracks of former survey/ location. 1 kilom.
north of main sight ~~ha~~. Northeast of Chmela Kone.

Found some unmarked structures, toward south east,
area, I felt, like super surveyer, no bush was too dense!!

Decided to walk back towards where workers started which
is around the northwest area, they had cleared at least

3/4 of their first structure, to clear the entire area will
take at least 2 weeks, especially if we don't get more workers.
which is doubtful due to new pits being open on the main sight.
in increasing degrees. Dave, Matt and myself pretty much
split up and decided to meet at U.S. 1

Structures which have been marked, ~~to~~ are varied in size.
extremely difficult to discern due to dense overgrowth.

Site seems extremely large. Once cleared, more will be known.

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand what consumers want and what problems they are facing.

1. The first part of the paper discusses the importance of the study.
 2. The second part of the paper discusses the methodology used.
 3. The third part of the paper discusses the results of the study.
 4. The fourth part of the paper discusses the conclusions of the study.
 5. The fifth part of the paper discusses the implications of the study.
 6. The sixth part of the paper discusses the limitations of the study.
 7. The seventh part of the paper discusses the future research.
 8. The eighth part of the paper discusses the acknowledgments.
 9. The ninth part of the paper discusses the references.
 10. The tenth part of the paper discusses the appendices.

p. 88-¹⁵⁻⁵~~11-11~~ ex. 12, 15.

During Survey found possible opening of Kabraala,
location. Southwest sight. ~~at~~ U. ~~within the opening~~
depth is about 1 meter BBS, surface collection was taken
on north side ~~of~~ towards the opening or beiging of mouth.)
surface of north wall is composed of impeded sherds,
along with fallen dirt, which is where ^{surface} collection is being
taken, ground surface surrounding depression, seems to be
a flat ^{depression} structure, (it will be given a number later), within the
mouth depression, all walls, up to about .4 meters, have been
freshly, exposed, after, 4 meters, mouth extends west, and
is densely, overgrown.

Surface collection findings have been in the form. of
undecorated sherds, both large and small, few red pottery fragments.
large rim sherds,

lot 1. op. 10K.

location; 300 meters west of Z/200 m. South of W/150 m. S. of Y/
100 m. SE. of main site/

4 fields w. of River/area is ^{located} edge of dense woods.

total of 13 structures found. Trees scattered
throughout site, due to dense overgrow, clearing was
needed. Four of structures are separated from central
group by fence, these structures were not in need of clearing.
Many of these mounds are severely damaged due to the intervention
of large trees. Area surrounding is generally at present, unused
fields. Owner: Sinceri.

Structure 1. structure with destroyed terrace, due to large
tree, about 2 meters into terrace. located south, corner
of site. condition in the form of tumble. ^{surface undefined, has not}
^{cleared.}

structure 2, located other side of fence, separate from main
group, fairly preserved, good sized mound. Fence is intervening
left end of structure. Surface displays no special features.
ground surface is composed of large concentrated river cobbles.
especially on summit.

structure 3. ¹⁴

Structures 10, 11, ~~12~~ and 1 are destroyed structures. The other
structures are similar to Structure 1 in construction and
size and height

Note: west end of site has stone road, which is composed of
River cobbles, which could explain the scarcity of cobbles on many
structures.

located on lower terrace,

3rd. south of main group, Transitioning 5 structures, located at east end of field. fairly large Babcocka running northeast, southwest, about 15 meters from structures, structures are located on flood plain. structures have been severely damaged due to flooding.

3-2- area was cleared of thick brush. clearing only needed in on structures. land currently used as Cow pasture, present land owner, Sinceri.

structure 1 - covered with large River cobbles, interrupted by field fence, on right end. Elevated no more than a meter.

structure 2 - covered by various sized river cobbles, considerable xant compared to structure 1, located on the the right of structure 1, elevation also no more than a meter.

(measurements are based on general surface view)

structure 3 - not as elevated in comparison to structure 2, but, displays simular features.

structure 4 - severely damaged due to flooding, cut through summit, barely any elevation. cobbles not as concentrated and smaller in size, located on left and just above structure 1

structure 5 - located far left of structure of 1. also severely damaged due to flooding, elevation, similiar to structure 4.

faint. cut through east side of structure.

All structures have have been victim of severe tumble down.

General formation is ~~wide~~ circular.

Surface
Collection
10 R.

located next to river by edge. Structures situated on edge are severely destroyed due to large River cut. large and abundant surface collection was taken in this collection. was found pieces of obsidian, ^{small} jade piece and today, during the process of our second surface collection, was found an unworked piece. This new collection is called 10 R. this collection will encompass all of site AH, this includes the structures, the road outlining the area. (which small tumble and sherds have been found). (also unique pieces have been found. i.e. candle bri. polychrome sherds.

land at present seems unused, the overgrowth is thick and dense, many tough, thorny bushes and cactuses, the site is divided by first a fence which separates it from the road, and about 5 meters from this fence, there is a large trail, which separates it again, and the final river edge which is about 30 meters from trail.

structures have been abundant but mostly dead, elevation on structures has been mostly non-existent. (to my disappointment.)

so far we have surveyed and marked about 14 structures, this number I feel will increase, due to thick foliage, we have not been able to continue on to the other side of the trail, but due to the tumble on the road, I feel there are more structures about 1 or 2. have been cleared between today and yesterday, it is now 10 of 10, and it is raining, so clearing has come to a standstill.

land owner. Sincer.

15-104 15
(p-88-~~104~~ 15)

Site AH.

We have decided to begin production of a ~~set~~ ~~set~~ sketch map with what we know as of now.

surface collection → The river cut extends at least until the fence boundary, about 40 meters down, later on down the cut it seems to narrow off. from its larger, ~~and~~ body many sherds have also been found in this extended cut. North section of site is being covered by David and Heather, the south by Senya and Garry and I, the north side, is also consisting of numerous structures.

A question has arisen as to how AH connects ~~there is also the question~~.

to LH (river cut) one of our aims is to trace to origin of LH to one of AH structures.

One unique structure has been found, its elevation is slight, it consists of 4 large River cobbles on its summit surrounded by a line of various sized river cobbles, on this summit we have found sherds, but also, uniquely enough, a bits of small ~~rock~~ glass, seeming to date, & in the 1820s, the formation of the rocks is unfamiliar to most Mayan constructions and due to this unusual rock formation, and the pieces of glass we feel, there is the possibility of a double settlement pattern, this unique structures we feel is unrelated to our present study.

I-16

AH structure

3/11/88.

15-12
p-88 - ~~104~~ ~~105~~

last night we reconstructed our sketch map. we found this morning that it was extremely accurate, Ed came out this morning to check the site out, he was pleased, he told us to change structure 13, by putting a declining terrace, and changing our east terrace off towards a NE angle from the main platform. Other changes were to make a connector from 14 to 15 and to note a change in elevation on 13's main platform on the north side to 50cm higher than the south. Using our sketch map we completed structures 4, 5, 6, 7, 8, 9, 10, (11 was discarded), 12, 13, 14, 15, 16, 17, 18. (19 was discarded) 20, 21, 22, 23, structures 1, 2, 3, have been cleared, but due to lack of time, were not transited in. we plan to continue moving our present position of the transit and mapping in points 1, 2, 3, Monday which are located about 60m. app. from our main group. The north end of the site beyond the gate still has yet to be cleared, we have surveyed so far. 3 structures 1 being pretty huge in size, there are possible more, in this area, the cliff drops just about where the gate corners. there are many destroyed mounds on this cliff which to the south meets up with 10h. Monday we're going to transit in 1, 2 and 3, and get Renee to start clearing the north side. After this we'll get Renee to clear the west field which is impossible for us to survey due to this dense bush in that area.

2014/10/10

[illegible]

Mound Description.

str. 13. large platform structure. with 2 terraces and one large rectangular super structure. with 3 separate concentrations of rock, which we decided to take 3 elevations on. The terraces are located on the west and east side, the front and back of the super structure. The south side is 10cm higher than the north side.

On the main platform the north side is high than G.S. (about 40cm).

About 40cm. higher on the south. Western side of platform.

has large latere hole, Dia. of whole is 2.100,

There a large River cobbles of various sized on all features of the structure. 1 partly visible cut rock on top. 1 piece of sh. on middle concentration, the east terrace goes off at NE angle from platform. ~~few rocks~~ decided on 3/14/88 that

extension to super structure on north side is poss. terrace, making 13, consisting of 3 terraces, west, east & south,

obsidian blade found, along with large sherd collection.

beginning of terrace, large cobble concentration

The boys, they are not my friends

The first thing I noticed when I stepped out
of the car was a strong sense of relief. I had
been waiting for this moment for a long time.
The air was fresh and the sun was shining.
I felt like I had been waiting for a long time.
The first thing I noticed when I stepped out

P 88 - 15-18

Mound Description.

1+2 are about a meter apart.

All structures are close to trail.

most of their dia. reaches the river cut to the road, which is only about 5 m. apart.

elevation. rocks are inconsistent w/ one another.

1. structure 1 - basically dead structure, falling off cliff on east side, no elevation, few large river cobbles, before drop off cliff, and tumble to about the beginning of the trail. southern wall 260, northern wall 290. length 260 bulk of structure to about cliff is 160; no sherds wall lines visible.

structure 2 - also falling off cliff, few cobbles, varying size. wall lines visible, about 180 cm. to beginning of structure to cliff.

structure 3 - Sizable structure, with moderate elevation. large cobbles on surface scattered, good wall lines present, tree located on south corner.

structure 4 - structure consisting of only 3 rocks. basically dead, no elevation. surface collection taken. (dia 20-190)

structure 5 - structure consisting of few scattered cobbles. far and few in between, no elevation, hardly dead. (dia. 300 x 340) surface collection taken

structure 6 - (340 x 180 dia.) dead structure, few cobbles, spread far apart. post. located on west side, (150 dia. length 340 across) few sherds.

structure 7 - about 2m. from 6. 4m. from cliff. few sizable river cobbles. on east side small concentration of med sized cobbles.

structure 8 - 20 meters before drop, few cobbles, good line before drop. sherds found.

structure 9 - historical, river cobbles forming a complete square. S.W. corner. poss. fire place, having slight elevation. aged glass found, along w/ sherds, cultural combination site. surface collection taken (about 5.)

structure 10 - large concentration of large river cobbles. in possible center. ranging from 20-30cm. good line on west side about a meter from poss. center. large cut block between, 8, 10. 12-40 / 1-12. 1x12x40 - in size.

HARRIS, J. G.
HARRIS, J. G.

(obedien w.s.)

0-60 BGS

19A/35 continued, 40-60 BGS 1.0m. 20m. north of south
of trench 1x1m \square , not much obsidian found, but, ^{43 small pieces} Baja. Regue, fragments.
19A/36, ~~20-60 BGS, 50cm into 1x1m. to square 1A, moving~~
60 to 80 cm down,

Luis. 19B/5 - 1m east of lot 4 0-20cm BGS,

19B/6 1m east of lot 4 20-40cm. BGS.

19B/7 " " " 40-60cm. BGS. poss. wall starting
in lot 6, leaving 25cm off of original 1x1m. poss. wall on east
side of lot.

19B/8 1m east of previous lot moving up structure, large
rocks found. ~~below ground surface~~ extending back to
east wall of lot 7, large foot found, along with shell fragments.

southern.

20B/1 - not started yesterday, underway today, started ing. 1x1m unit,
20cm. starting, following, pavement from, lot 20A, rocks stop.
abruptly, lot could be useless.

20B/2 - large River cobble found. in S-E corner of lot 1,
seems connecting to large cobbles in 20A. NE corner lot, extending
lot 2. 1x1m. N.E., basically for the purpose to give workers more
room to pursue poss. corner, along with 20A's pavement.

Site - Group 1240

location: 100^m in from main access road toward south, located next to boundary fence, of Sinceri, and Arturo Paz, halfway between main road and site, 250m. from main site.

Thickly overgrown, needed clearing, land owner Arturo.

5 structures, 4 with elevation, trees located on many of the mounds, mostly well preserved, land unused at present time.

structures in definite circular formation, cut block throughout site.

str. ① Few large cobbles, slight elevation, tree located on NE corner of structure, good line on summit, terrace located on SE end. good line on terrace. N & S west corners are approx. due to unclearing. large cut block on NE tumble, small cut block frag. through str.

str. ② large cobble located at SE corner. (40cm) good lines throughout structure, infinite elevation, but not worth recording.

str. ③ large structure, sizable elevation, good lines on every corner. large cobbles throughout. large cobbles located NW corner, (40cm) well preserved.

str. ④ cut block on summit and also on NW corner, poss. cut block about a meter away from, cut block on NW, two large cobbles on SE + NW corners, structure in good condition besides small tree on summit and SE corner. sizable elevation, seems connecting to structure 3.

structure ⑤ largest structure of group, seems to be facing entire group. small pieces of cut block sticking out through surface, noticeably high elevation, good lines throughout. tree located ~~tree~~ on SE corner, about in a 1/2 meter. roots extend into summit, smaller tree located on NE corner.

location: 130 meters from 240, about 150 from main sight.

going west. 4 structures, 1 + 2 having infinite elevation, 4 due to unclearing can not be decided, one point was taken.

in accordance with a fairly good line on the NW corner.

3 being the largest has a sizable elevation.

str. 1. basically dead, good line on SW corner, located next to fence on the W side, few cobbles beside line.

str. 2. little elevation, few cobbles, sizable cluster on.

SE corner. located extremely close to str. 3, 2 could be a possible terrace.

str. 3. huge mound, large scattered river cobbles, in the form of tumble, and large cluster near ~~surface~~ summit.

tree located on summit, and gate runs through.

west edge. east edge has been eroded and drops down. large stones located on SE corner, (45 cm. at least).

gate also runs through. south edge. even though this

structure sounds totally screwed its huge and its hear.

str 4, due to unclearing, unable to map accurately.

took 1 point on good line, located on NW corner,

large ~~cut~~ cut rock. (0.25 - 0.5) located in area

around 4, along with other large usable stones.

seems to have no elevation.

General land, owned by (

overgrown - unused land.

1. The first step is to identify the problem. This involves understanding the situation and the goals that need to be achieved.

1. The first part of the paper is a review of the literature on the topic of the paper. It discusses the various methods that have been used to study the topic and the results that have been obtained.

2. The second part of the paper is a description of the experimental methods that were used in the study. It includes a description of the subjects, the stimuli, and the procedures that were used.

3. The third part of the paper is a presentation of the results of the study. It includes a description of the data that were collected and the statistical analyses that were performed.

4. The fourth part of the paper is a discussion of the results of the study. It discusses the implications of the findings and the limitations of the study.

5. The fifth part of the paper is a conclusion. It summarizes the main findings of the study and provides a final statement on the topic.

21A/2 Continued, 0 - 70 BLS. (NW corner) soil type (B)

Excellent line found 59 cm BLS, consisting of L. moderately sized rocks, ranging from 20 to 40 cm. in length and width, line spans across entire 1 x 1 m trench, I believe we have hit sterile at 70 cm. BLS, next lot will move 1 m. further onto structure, to continue search for basal wall, matate fragment found, moderate amount of sherds, more polychrom, coming out from 40 - to 70. BLS. Drawing pg. 49 of 21A/2 line. (Pine St.)

21A/3. 1 x 1 m. ex. north. from previous pit. 0 - 70 BLS (NE)

0-40 few sherds coming out, no lines as of yet, very few rocks,

line found at. BLS, not in good condition, I am not buying it for a basal wall. X extracted

21A/4 1 x 1 ex. north, of previous pit. looking for basal wall. 0 - 55 BLS. (continued tomorrow)

21B/3. 1 x 1 m. ex. south, of previous pit. to uncover, large cut block, and continue further on structure. ^{lot 1, 2} ~~entire trench~~ ^{NWC} 0 - 60 BLS does not go beyond 35 cm. BLS. soil level ^{ore} ~~is~~ has not changed from humus, and sherds of same type, utilitarian, coarse, light orange ceramic, cut block is not part of line. I plan to remove it, along with other large rocks to the west of it, which were obvious tumble, cut block removed.]

BLS 55 cm. from surface - 70 x 28 x 20.

BLS 15 cm. from wall - 50 x 20 x 22,

small line forming across trench, consisting of small rocks, in curved formation, carbon found, huge amount.

→ large piece, about 7 cm. in length, at 57 cm. BLS on west side of trench, 283 cm. from original north trench wall. (ex. 1 x 1 =. name and note small walls).

14-11-1944

14-11-44

1. The first thing I noticed when I stepped out of the plane was a cold breeze. The ground below was a mix of brown and green, with some patches of snow. I felt a sense of relief as I stepped onto the solid ground. The air was crisp and clear, a stark contrast to the humidity of the tropics. I took a deep breath and felt the cool air fill my lungs. The landscape was flat and open, with a few small buildings in the distance. I felt a sense of freedom as I walked towards the horizon. The sun was low in the sky, casting a warm glow over the scene. I felt a sense of peace and tranquility as I walked alone in the vast landscape.

2. The second thing I noticed was the sound of the wind. It was a low, steady hum that filled the air. I felt a sense of calm as I listened to the sound. The wind was a constant presence, a reminder of the vastness of the world. I felt a sense of connection to the elements of nature as I walked in the wind. The sound of the wind was a beautiful melody that I had never heard before. I felt a sense of joy as I listened to the sound. The wind was a reminder of the power of nature and the beauty of the world.

3. The third thing I noticed was the taste of the air. It was a mix of salt and earth, a taste that I had never experienced before. I felt a sense of wonder as I tasted the air. The taste of the air was a reminder of the diversity of the world and the beauty of the elements of nature. I felt a sense of awe as I tasted the air. The taste of the air was a beautiful reminder of the world we live in.

4. The fourth thing I noticed was the sight of the horizon. It was a straight line that stretched across the sky. I felt a sense of awe as I looked at the horizon. The horizon was a reminder of the vastness of the world and the beauty of the elements of nature. I felt a sense of wonder as I looked at the horizon. The horizon was a beautiful reminder of the world we live in.

5. The fifth thing I noticed was the feeling of the ground. It was a mix of soft and hard, a feeling that I had never experienced before. I felt a sense of connection to the ground as I walked. The ground was a reminder of the power of nature and the beauty of the elements of nature. I felt a sense of awe as I felt the ground. The ground was a beautiful reminder of the world we live in.

27C/1

1A 63-C/1 - IX placed 3m from visible line of surface cobbles.
on east side of structure (poss. rear of) 63 of group 1A,

one of the smaller structures of the group; outline the small plaza.

0-50 BLS, ^{NEC} few sherds found, polychromes, utilitarian, brightly painted.
poly. running into clumps tumble, soil type same as A/1 of structure
58. still few sherds at end of day, 50 BLS - possible wall found
explore tomorrow - no soil change.

1A 65-B/2 - spans from 108cm from original west trench
wall to south trench, to the NW corner of original wt w.

second line found, beneath first diangle, following its
parallel slant also consisting of large rocks, similar in size,
seemingly like a step, soil change takes place. 30cm BLS from
dark humus w/ roots to a lighter version with less roots.
and a drastic change occurs 50 BLS to a lgt. fine hard
soil, extremely dry and dusty, area below second wall
seems to be void of rocks, it is the poss. beginning or
ending of something.

27 A-3 Rocks have become tumble, there is no platform, I repeat
there is no platform, all tumble, which in both pits will be
removed, soil change has taken place, from 0-35, dark humus
with roots, small rocks, moist, 35-40. lighter form of humus.
40-56 light, brown, hard, fine, dusty, dry, tomorrow will
remove rest of tumble.

12-11-72

1/25

1. The first thing I noticed when I stepped out of the plane was the cold. It was a sharp contrast to the warm, humid air of the tropics. I shivered slightly, pulling my jacket closer. The ground beneath my feet was a mix of soft earth and gravel, and the air smelled of pine and distant fires. I took a deep breath, savoring the crispness of the mountain air. The view from the edge of the cliff was breathtaking, with snow-capped peaks and a valley filled with evergreen forests. I felt a sense of awe and wonder, knowing that I was in a truly special place.

2. As I walked along the path, I noticed the way the light filtered through the trees. It was a golden glow, creating a magical atmosphere. The sound of the wind rustling the leaves was a constant companion, and the occasional chirp of a bird added to the symphony of nature. I felt a sense of peace and tranquility, knowing that I was in a truly special place. The path led me to a small clearing where a stream flowed gently over smooth stones. I stopped for a moment, letting the water's murmur wash over me. The air was so clean, so fresh, that it felt like I had been reborn. I took another deep breath, feeling the cool air fill my lungs. I knew that this was a place I would never forget.

3. The stream led me to a small waterfall, where the water cascaded over a series of rocks. The sound was a beautiful melody, and the mist created a soft, ethereal glow. I stood at the edge of the falls, feeling the spray of water on my face. The air was so clean, so fresh, that it felt like I had been reborn. I took another deep breath, feeling the cool air fill my lungs. I knew that this was a place I would never forget. The path led me to a small clearing where a stream flowed gently over smooth stones. I stopped for a moment, letting the water's murmur wash over me. The air was so clean, so fresh, that it felt like I had been reborn. I took another deep breath, feeling the cool air fill my lungs. the first part of the trip was very good. The weather was perfect and the scenery was beautiful. We saw many interesting things and had a great time. The only problem was that the car broke down twice. But we got it fixed and continued our journey. We were very lucky to have a good driver. He was very experienced and knew the area very well. We also had a very good meal at a restaurant. The food was delicious and the service was excellent. We were very happy with our trip and would recommend it to anyone who is interested in visiting this area.

1. The first thing I noticed when I stepped out of the plane was the cold. It was a sharp contrast to the warm, humid air of the tropics. The wind was strong, and the clouds were thick and grey. I felt a sense of isolation, as if I had been transported to a distant world. The landscape was flat and desolate, with no signs of life or civilization. I walked for hours, my feet aching from the hard ground. The sun was low in the sky, casting long shadows and a golden glow over the scene. I felt a mix of emotions: excitement, fear, and a deep longing for home. The silence was deafening, and I could hear the sound of my own breathing. I knew I was alone, and that realization made me feel both small and powerful at the same time. The journey was long and arduous, but I was determined to see this place to the end.

p 88-15-111

Trench runs E.W. on structure 1A-58

27A = starting from first wall east of Heaven Hill.

Medford
is located
in ash layer

located 252cm from Heaven Hill, 105cm above
Medford Platform, Medford Platform, composed of
moderately sized cobbles, ranging from 25cm L+W.
to smallest ranging from 13cm L+W, Medford Platform.

note x
names of
trench 27A
have varied
them, from
vokha to
general
figures.

runs into Heaven Hill wall. (which Ed has taken in
in depth notes on) Heaven Hill has a counter part, which
in the south side interior wall, due to breaking through
Medford, to continue exploration of depth of Heaven Hill.
Medford is 98cm in length and spans across. Straight

trench, it is located 150 BLS. on north side, 132 on south
due to overlapping of rocks, depth is 18cm, Angle = 295°
first wall east of Medford is ~~132~~ ^{Russian} located 252cm
east of Heaven Hill. 30 BLS, spans to ends of straight trench.

117cm E.W. 15 depth, composed of 3 lines, outside
lines, large cobbles largest 47 in length 19 across, these
outside lines are located on the (1st) west (2nd) east.
line in middle is composed of med sized cobbles. 20cm
in L+W. Angle = 292° line composed of smaller
cobbles in between, located in humus stratum,

next group of walls, 13. OLD BRAND DAD + C.C.,
OLD BRAND DAD is 54cm east of Russian, also in ~~the~~ humus
stratum, spans across trench, 46cm in length E.W.
50cm deep, composed of med sized cobbles.
on first beginnings, and small cobbles, make up depth.
similar to Heaven Hill. Angle = 110°

wall located 50cm below OLD BRAND DAD depth
22cm spans trench composed of moderate to
large sized cobbles. located in beginnings of ash layer.

②P.

p-88-15-114

poor
condition

6th line, Cutty Sark, located 60cm from Flord de
Corra, spans trench, composed of 4 med + large sized
cobbles, 15cm deep. 30 BLS. Angle = 102° falls in stratum,
layer humus.

7th line Night Train. 22cm from Cutty Sark.

Spans trench, 31cm BLS. 1 line rocks deep, 15cm.
composed of 3 small to moderate sized cobbles.
and 1 large cobble on north side. measurements, 42×19 cm.
Angle = 384° humus stratum.

8th line - Mad Dog, located 38cm from night train,
spans trench 27cm deep, 20 BLS, composed of large
cobbles and one cut block in center. 3 rocks altogether.
for surface line. mixture of small and med. cobbles.
for depth. Angle = 310°

9th line. = spans trench, 33 BLS. 16 cm deep. in humus (J+B)
stratum, composed of 2 cut blocks, on south located
side, gap in between, cobbles on north. Angle = 100° 31cm from
m/o.

10th line. Dry Sack, located directly below

Dry sack. 8cm, to the east. spans trench, comes out.
22cm from J+B. 1 line moderate cobbles deeps. (17cm).
37 BLS, falls in humus stratum, composed of
3 mod. sized cobbles, Angle = 94° .

11th line. = CHEV'S Regal, located directly below. Dry Sack
comes out. 26cm from Dry Sack spans trench,
26 cm deep, composed of 4 perfect conditioned cut blocks.
entire wall is in great condition, 2 blocks on S + N side.
are in trench walls, but can be seen, depth of wall is
composed of small cobbles, Angle = 103° ;
falls in stratum ~~by~~ humus.

12th line = directly below Chev's Regal 25cm deep. only 50cm
across exposed of line. same construction as Chev's Regal.
same angle. same humus stratum.

270/ Trench running NW-NE.

Trench placed on structure. L3. of site 1A;
 soil (A) ⁵⁶⁻⁶⁵ trench is 510cm long, 1m across. contains 2 walls
 soil (B) ⁶⁵ one platform, starts 4m off structure. ends
 first 1x1 on summit. 2 soil layers. A (humus) dark brown
 test for w/ roots, small rocks, hard texture, B = lighter version
 depth. of humus w/ out roots + rocks,
 1st wall. located. 175cm west of original east
 trench wall; spans across trench. 40cm deep 2 layers
 of rocks. name = SALVA VIDA, both deep + across.
 composed of all med sized stones. largest is 28x24cm.
 Angle 116° located in soil A.

2nd wall Export Royal located. 127cm west of
 SALVA VIDA, tumble on base of excavation in between
 at 60. Export Royal spans trench and is the
 facing for. Platform which extends to west trench
 wall. 23cm deep (great condition) composed of
 moderate sized stones. largest in wall is 23x18cm
 largest in platform is 30x23cm, Angle 149°

OP 21 E. description for trench due to plan points not plotting
 Correcting, Angle of trench walls. $N = 79^\circ$ $S = 69^\circ$ $E = 164^\circ$ $W = 160^\circ$
 trench running north + south, 5 meters long.
 contains two walls.

Mike Tyson = first wall (270) from original north trench wall.
 (13 BLS) 1 coarse stone depth (15cm) spans trench.
 composed of moderate to smaller stones, horizontal thickness.
 (13cm). 2 coarse stones thick on top, largest stone is
 (32 x 18 x 15) smallest (10 x 10). Above view.
 Angle = 260° located in humus stratum.

Duran = second wall located 117 from Tyson.
 1 coarse stone thick (depth) 12cm, starts 16 BLS.
 spans trench, located in humus stratum, horizontal thickness.
 top 1 coarse stone thick, composed of moderate sized
 stones, ranging averaging (23, 15). Above view,
 Angle = 260° , two cut blocks protruding
 out from wall to the north, sizes = $28 \times 32 \times 9$.
 other cut block, cracked, part of larger rock.

* one soil level present, humus, 0-43 BLS.
 beginnings of other showing at base of
 excavation.

OP 21 FA 1x1 placed in cut in road to expose plaster wall
 Angle = 65° .

OP 21 F (B) 1x2m placed to the east of 21 FA.
 cross section. no features, test pit, trench walls.

$N = 40^\circ$ $E = 215^\circ$
 $S = 42^\circ$ $W = 320^\circ$
