Full Description :

Solid fragment of a hollow, zoomorphic multi-chambered ocarina which includes the depiction of a three-dimensional bird head. The head is round in shape and includes 2 punctated sphere eyes, one mounted on either side of the head and a grooved triangular beak with an applied, doublely-punctated bill-bump. They eyes are oriented directly accross from one-another (this is unusual). The head appears to have been appliqued to the upper surface of a spherical sounding chamber, but is, itself, solid. The interior surface of the chamber is very smooth. No paint, slip, or firing damage.
