VERBAL DESCRIPTION: This is an intact - broken metate leg.

It is a corner - edge-centered leg - can't tell location.

The basic cross-section of the leg is round - square - rectangular - oval - tear-drop shaped - other (describe).

It is chipped (as a manufacturing process) - pecked - not ground down at all - ground only on the highest parts - moderately ground - ground smooth - chipped (as in broken) - battered - reused as a pestle or pounder.

It is cm high.

It is cm by cm at its largest point.

The end, if present, is flat - flat but beveled - rounded - pointed. It is by cm.

Part of the upper, working surface is - is not attached.

If present, the upper, working side is lightly ground on the highest parts - moderately ground - smooth - glossy - slick.

If the surface is heavily used, slick, and/or glossy, the shine does - does not continue to the edge.

The material used to make this metate is vesicular basalt - volcanic tuff - limestone - granite - other (describe).

If basalt, the item is very, moderately, lightly porous.

Drawn - Not drawn.
