PROYECTO VALLE DE CACAULAPA CATALOG FORM

DATE: 20 July 2005

LOT NUMBER: PVN 202 DU / 003

SUBSTANCE: Ceramic

OBJECT: Sherd disk

CATALOG #: DU / 003 - 21 MULTIPLES? no DRAWN BY: bb

PASTE GROUP (for ceramics) EXCAVATOR: CATALOGED BY: bb

MAXIMUM--HGT/LENGTH: 3.6cm WIDTH: 2.2cm THICKNESS: .5cm

VERBAL DESCRIPTION: This sherd disk is intact: y n.

If no, approximately what percentage is preserved (give a number): 6cm 22%

It is pierced: y n

The pierced hole is biconically drilled: y - n

If not biconical, describe:

Hole's maximum and minimum diameters are: Max = Min =

A scribed/lightly incised line demarcating the circumference is visible: y n

The margin/edge was chipped to form the disk: y n

The margin/edge was deliberately ground to smooth it: y n

The margin/edge is smoothed from use: y n

There is other use wear visible: y n.

Trace the disk on the reverse, both frontal view and profile, and show where there is use.

Describe the use: **(1b)** This brief part of the margin is smoothed flat, as the smoothing approaches **(1a)** it becomes slightly tilted, but still flat only along the margin such that the edge is not rounded on either side (ext living)

The type-variety from which this was made is:

PIT

Comments:

(2) is a not-used but flat, slightly rough margin that may not be the result of a natural break.

The corner b/t **(1)** + **(2)** is defined something like that in such a way that this does not appear to have been made as a full circle.

(1b) + **(2)** are differentially smooth and that **(2)** is ~~not~~ not use, and **(1b)** is.
