Inclusion more than just small and eroded sherds. Can maybe more w/ this (2k), once I have looked more at the Early Chayn lower down in the subgp. That is some of the sherds may be from local levels -- go into the fill / below the final phase architecture?

Description:

A pattern of tumbling stones clearly emerged while digging and looking at the profile.
A plan drawing was made.
This lot likely included the surface of the lower terrace.

Description:
 Many nice items were found. It does include a thin piece of jade, 32 bones, 1 tooth, 1 human tooth and a tiny white bead made apparently of shell. We are wondering if this abundance is either the result of a close tomb or a midden.

Description:

The remains of a wall clearly appeared. 2 stones are still in place and two others tumbled. Bones were found and apparently a carved stone. The first stone of each wall measured 22cm. The second measured 12cm, and 9cm for the third and fourth ones.

Description:

We are in the fill of wall one.
The site may have been occupied during the Pre-Classic.
Connection and time are unclear.
But we found rims with a depression and some usulatan pottery(resisting black lines)

Special Objects:			

Description:

We are below the floor of the plaza.
Certainly 3 walls of four stones composed the structure on its northern side.
They were built on a midden.
The southern side certainly had a straight wall like in El Puente. Easier to build.
We dug by 40 other centimeters.
Marcello found in his pit, some Pre-Classic sherds.

CALIBRATION OF RADIOCARBON AGE TO CALENDAR YEARS

(Variables: C13/C12=-27.3;lab. mult=1)

Laboratory number: **Beta-202410**

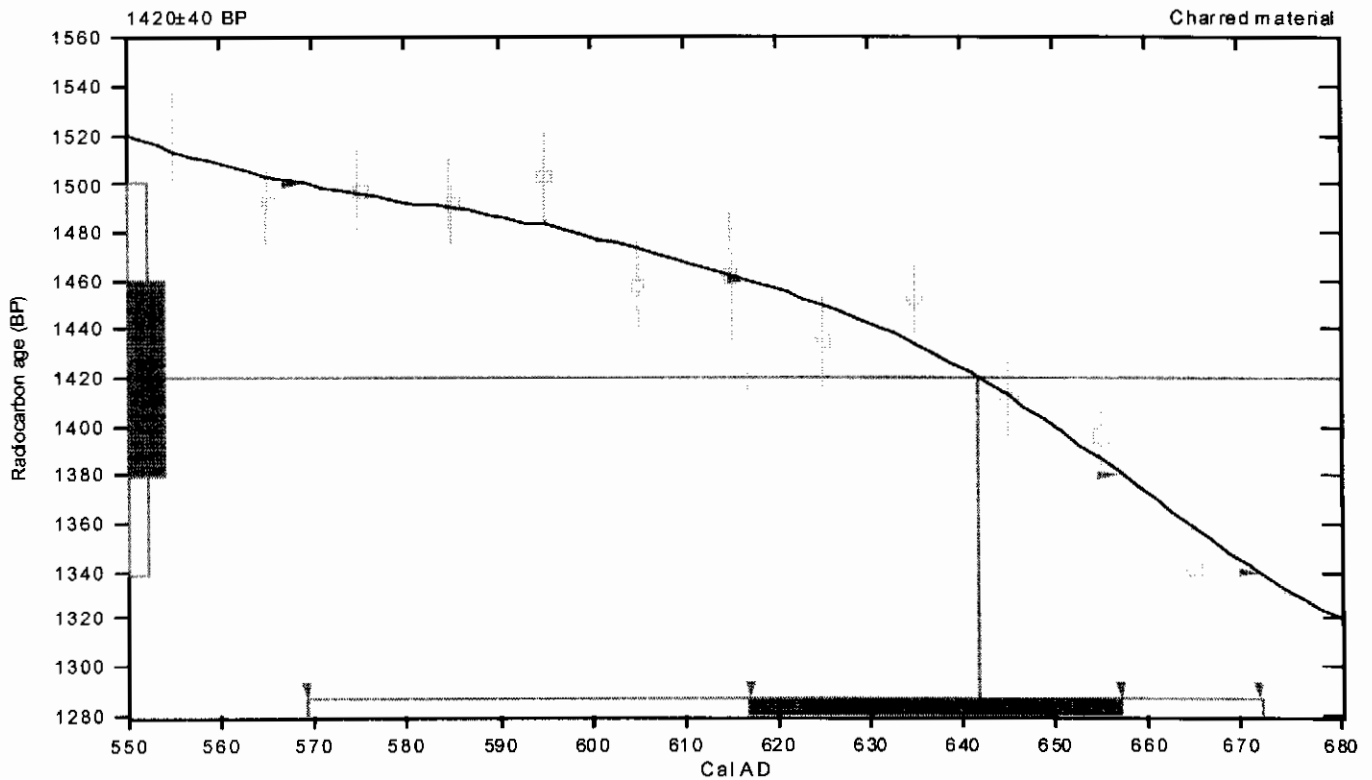

Conventional radiocarbon age: **1420±40 BP**

2 Sigma calibrated result: Cal AD 570 to 670 (Cal BP 1380 to 1280)
(95% probability)

Intercept data

Intercept of radiocarbon age
with calibration curve: **Cal AD 640 (Cal BP 1310)** ←

1 Sigma calibrated result: Cal AD 620 to 660 (Cal BP 1330 to 1290)
(68% probability)
