PHOTO/DWG NUMBER

P8B 36/35-1

Fairly coarse paste - ~~shaped~~ Shaped like a rectangle that has a triangle attached to the length of one of the short sides - and the point of triangle is facing out - so the flat sides of each figure match up. The front surface of the lid has a geometrical design carved into it. a slightly rounded line goes across the surface parallel to the one smooth rounded edge. Perpendicular to this line are 4 lines extending down away from rounded smooth edge. These lines connect w/ the rounded line - however they do not intersect it. The first line is about 1.5 ^{cm} from the triangle end of the fragment. There is about 1cm between it and the next line. which is paired w/ another line - they are 1.6 cm apart. The 4th line is 1 cm away from the 2nd line in the pair. The parallel underlying surface is much smoother than the front, and fairly well worn. Given that there are one frontal plane - the edges that lie in the transverse plane - 1 is a smooth and rounded edge - its parallel edge indicates a definite break. The edges on the sagittal plane are both broken, rough edges. One is a fair straight break - the other is a break in the shape of a triangle. There are white, pink and clear shiny spots running through surface.
