Full Verbal Description

Corner fragment of a groundstone metate. Roughly a triangular-shaped piece, with 2 sides and corner in good condition, with one large break from side to side. Relatively large amount of working surface (top) is here, yet it is worn only semi-smooth. It is much smoother than the worked-curved bottom side, yet still has the bumpy holes, making it a little rough still. Bottom side tapers up to edges, as seen in drawing.

Handwritten notes at the top of the page, including a circled number 17 and several lines of text that are mostly illegible due to fading and bleed-through.

Handwritten notes in the middle section, describing the specimen and its characteristics. The text is mirrored and difficult to read due to bleed-through from the reverse side of the paper.
